# Clean Design Manifold Valve

Low fluid accumulation ( E LK ROHS)

IP69K

New

Easy to clean

Large flow rate

 $1,600^{\circ}$ L/min (ANR)

**Enclosure: IP69K** 

**NSF-H1** grease

**External parts: FDA-compliant materials** 

Metal parts are made of stainless steel 316 with high anti-corrosion performance.

Wiring: Lead wire/ Fieldbus type 🚷 IO-Link

\*1 When the inlet side is 0.6 MPa, and the outlet side is 0.5 MPa (20°C)

\*2 The lead wire type cable is not made of FDA-compliant materials

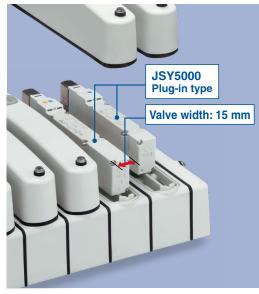

The photo shows the IO-Link compatible manifold.

Crevice free exterior and can be cleaned without disassembly

Cleanable space between valves

Valve width is 15 mm.

Sub-plate (Single unit)

Blanking plate [With two mounting screws] p. 34

Used when valve additions are expected or for maintenance

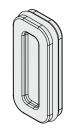

#### SUP/EXH blocking disk p. 34

#### [SUP blocking disk]

By inserting the SUP blocking disk in the pressure supply passage of the manifold valve, can provide two different high and low pressure in one manifold.

#### [EXH blocking disk]

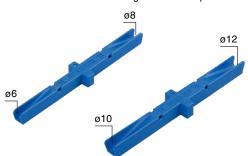

By inserting the EXH blocking disk in the exhaust passage of the manifold valve, can separate the exhaust from the valve so it does not affect the other valves. It can also be used for the manifold for the positive pressure and vacuum mixed manifold. (2 pieces are required to block EA/EB both sides of the EXH.)

Series	SUP blocking disk	EXH blocking disk
JSY5000	JSY51M-40P-2A	JSY51M-40P-2A

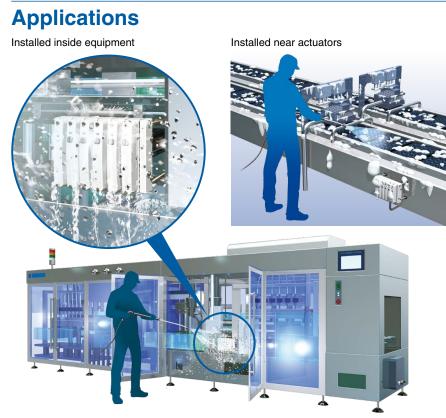

#### ■ Tube releasing tool p. 33

This tool is used for removing the tube from port A and B.

#### **IP69K** manifold

IP69K products are IP6X (IEC/EN 60529) and IPX9K (ISO 20653) compliant and protected against dust and high-pressure hot water.

#### **Glossary of Terms**

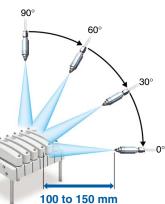

IP6X: Dust-tight

IPX9K: High-pressure and temperature jet wash

Not adversely affected under the following conditions.

Sample placed on a turntable and rotated at a speed of  $5\pm1$  rpm. Hot pressurized water at  $80\pm5^{\circ}C$  and pressure 8 to 10 MPa is then sprayed onto the sample at a distance of 100 to 150 mm with a jetwash nozzle from four position:  $0^{\circ}$ ,  $30^{\circ}$ ,  $60^{\circ}$ , and

position:  $0^{\circ}$ ,  $30^{\circ}$ ,  $60^{\circ}$ , and  $90^{\circ}$ , for 30 s for each position. Flow rate:  $15 \pm 1$  L/min

Surge voltage suppressor			Diode (Varistor for non-polar type)
Indicator light			LED

<sup>\*1</sup> The product is IPX9K compliant (protected against high-pressure hot water). However, operation of the valve must be within the specified valve ambient temperature and fluid temperature range.

<sup>\*2</sup> Impact resistance: The value at which no malfunction occurs when tested in the axial direction and at right angles to the main valve and the armature in both energized and de-energized states, once for each condition (Values from the initial stage)

Vibration resistance: The value at which no malfunction occurs in a one-sweep test between 45 and 2000 Hz, performed in both energized and de-energized states in the axial direction and at right angles to the main valve and the armature (Values from the initial stage)

<sup>\*3</sup> For details, refer to page 37.

#### Manifold Specifications

	Туре	9	Lead wire Fieldbus (IO-Link)*1			
Manifold type SUP/EXH port type			Plug-in connector connecting base  Common SUP/EXH			
						Valve
Internal wiring		Positive common Negative common (Refer to "Electrical Wiring Specifications" on page 14.)				
	SUP/EXH block 1(P), 5(EA), 3(EB) port		G1/2 (Based on ISO 16030)			
Port size	2-port type manifold block	4(A), 2(B) port	G1/4 (Based on ISO 16030)			
SIZC	5-port type manifold block 1(P), 4(A), 2(B), 5(EA), 3(EB) port		G1/4 (Based on ISO 16030)			
Enclosure		IP69K (Based on IEC/EN 60529/ISO 20653)				
Extern	al parts material		Resin parts: PA, Metal parts: Stainless steel 316, Rubber parts: EPDM			

<sup>\*1</sup> Refer to page 32 for the Fieldbus type for output (EX430 series) specifications.

#### **Manifold Flow Rate Characteristics**

		Port	size		Flow rate characteristics			
	Manifold block type	1, 5, 3	4, 2	1 → 4, 2 (	P → A, B)	$4, 2 \rightarrow 5, 3(A, B \rightarrow EA, EB)$		
		(P, EA, EB)	(A, B)	C [dm3/(s-bar)]	b	C [dm3/(s·bar)]	b	
	2-port type	G1/2	G1/4	6.80	0.31	7.64	0.23	
	5-port type	G1/4		5.60	0.21	5.67	0.22	

<sup>\*</sup> The flow rate characteristics values are for an individually operated 2-position type manifold base with 5 stations.

#### **Manifold Weight**

Manifold block type (2-port/5-port type)	Weight: g*1 (n: Number of stations)
Lead wire type	227 n + 1070
Fieldbus type	227 n + 500

<sup>\*1</sup> Weight without fittings. For when a lead wire type cable is 5 m. Add the weight of the valves to be mounted from the table below to find the total weight.

#### **Valve Weight**

Valve model	Type of actuation		Weight [g]
JSY5⊡03-H	O position	Single	86
	2-position	Double	96
	3-position	Closed center	
		Exhaust center	106
		Pressure center	
	4-position	Dual 3-port	92

#### **Response Time**

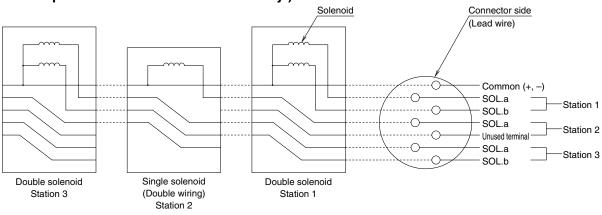

Valve model	Response time [ms]*1			
	Z type	U type		
JSY5103-H	40	32		
JSY5203-H	19	19		
JSY53/4/503-H	46	44		
JSY5A/B/C03-H	38*2	29*2		

- \*1 Based on dynamic performance test, JIS B 8419:2010 (Coil temperature: 20°C, at rated voltage)
- \*2 There will be an approx. 10 ms delay on the 2(B) port side due to the length of the pilot passage.

## **Connector Wiring Layout**

For both Fieldbus and lead wire types, additional valves are sequentially assigned pins on the connector. This makes it completely unnecessary to disassemble the connector unit.

# ■ Single solenoid valve is installed to all double wiring. (Double wiring specification) (Manifold specification sheet is not necessary.)

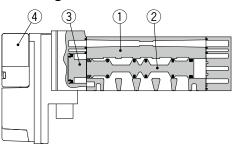

<sup>\*</sup> These diagrams are for the purpose of explanation, and differ from the actual connector wiring.

# JSY5000-H Series Valve Replacement Parts: Pilot Valve

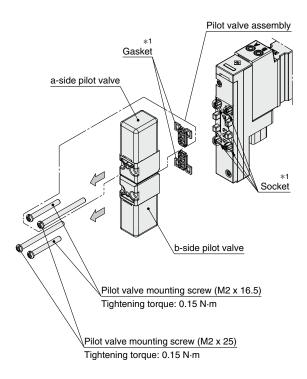

#### How to Order Pilot Valves (With a gasket and two mounting screws)

#### **∧** Caution

- The coil specification and voltage (including light/surge voltage suppressor) cannot be changed by changing the pilot valve.
- When selecting the standard coil type, it is not possible to change to the power-saving circuit type.

## How to replace pilot valves

- Remove the pilot valve mounting screws.
- Remove the pilot valve in the direction indicated by the arrow.
- \*1 Ensure the gasket is mounted, and take care not to bend the socket.
- \* Assemble by following the removal procedure in reverse.

10

# Clean Design Manifold Valve

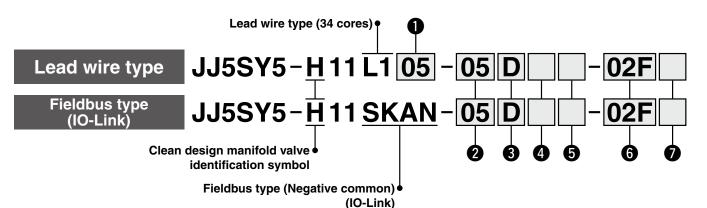

# JSY5000-H Series

**⚠** Caution

This is an IP69K compliant product. The manifold and valves are ordered as a set.

[IP69K Compliant]

#### **How to Order Manifolds**

## 1 Lead wire length

Symbol	Length
05	5 m
10	10 m
15	15 m

## 2 Valve stations

Symbol	Stations	Note
02	2 stations	
:	÷	Double wiring*1
16	16 stations	

\*1 Valve stations number includes stations with a blanking plate, and is the total number for all 2-port and 5-port type manifold blocks.

# SUP/EXH block 1(P), 5(EA), 3(EB) port entry

	o(==) por on y			
D	D side (2 to 10 stations)			
В	Both sides (2 to 16 stations)			

\* SUP/EXH blocks with U side only is not available.

#### 4 Pilot type

Nil	Internal pilot
R*1	External pilot

\*1 External pilot port is on the D side end block.

The external pilot specification should be ordered as made to order.

#### 5 5-port type manifold block stations

Symbol	Stations	Note
Nil	None	Specify the number of stations with 5-port type manifold blocks,
01	1 station	so this will be equal to or less than the total number of valve stations.
:	:	Specify the arrangement and blocking disk mounting
16	16 stations	position in the manifold specification sheet.

- E.g.) When the symbol is "02", 2 stations are 5-port type manifold blocks. When the symbol is Nil or blank, all stations are of 2-port type manifold block.
- \* When different pressures are required, use 5-port type manifold blocks with blocking disks. Use of 5-port type manifold blocks without blocking disks can be used to provide an intermediate SUP/EXH block function.

# 6 Manifold block port size

#### [Thread piping/One-touch fitting (Metric/Inch size)]

	[ · · · · · · · · · · · · · · · · · · ·

\*1 "T" (With power-saving circuit) should be ordered as made to order.

 Rated voltage 24 VDC

Light/surge voltage suppressor

Symbol	With light	Surge voltage suppressor	Common specification			
U			Non-polar			
Z	•	•	Positive common			
NZ			Negative common			

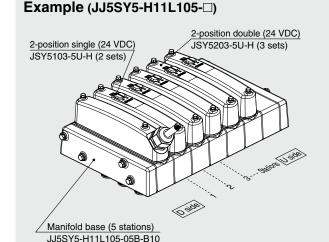

- \* Only "Z" and "NZ" types are available with a powersaving circuit.
- \* For fieldbus type manifold, select non-polar (U) or negative common (NZ).

## **⚠** Caution

• If the valve will be continuously energized, please be sure to use the powersaving circuit (continuous duty type). Refer to Made to Order on page 35.

## **How to Order Manifold Assembly**

**î∖ Caution** 

This is an IP69K compliant product. The manifold and valves are ordered as a set.

#### Ordering example

- JJ5SY5-H11L105-05B-B10·····1 set (Type H11 5-station manifold base part no.) \* JSY5103-5U-H·······2 sets (2-position single part no.)
- \* JSY5203-5U-H············3 sets (2-position double part no.)
  - The asterisk denotes the symbol for the assembly. Prefix it to the part numbers of the valve, etc.
- For the valve arrangement, the valve closest to the D side is considered the 1st
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure above. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

#### **Manifold Specifications**

In order to assemble complex manifold patterns, or for arrangements including 5-port type manifold blocks, please use the manifold specification sheet.

#### **How to Increase Manifolds**

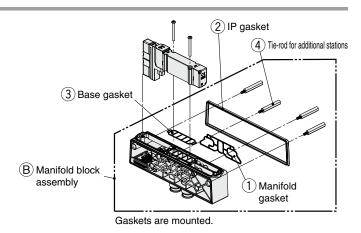

Loosen the hexagon bolt with flange 9 on the U side, and remove the © U side end block assembly.

For SUP/EXH from both sides, remove the © U side SUP/EXH block assembly.

- \* Do not loosen the hexagon bolt with flange of D side as the tie-rod is fixed to the ① D side end block assembly.
- Screw in 4 tie-rods for additional stations to the 5 tie-rod of the manifold.
  - Screw them in until there is no gap between the tie-
- 3 Connect ® manifold block assembly and © U side end block assembly that need to be added, and tighten ® hexagon bolt with flange on the U side. For SUP/EXH from both sides, also connect the © U side SUP/EXH block. (4 places, more than 2 turns)

Make sure that the washers are assembled to the hexagon bolt with flange. When mounting the manifold, make sure that the gasket is not misaligned, damaged, forgotten to be attached, and that there are not foreign objects.

Hexagon bolt with flange (M4) Tightening torque: 1.4 N·m (M3) Tightening torque: 0.8 N·m

#### Manifold block assembly

No.	Description	Quantity
1	Manifold gasket	1 pc. (Mounted)
2	IP gasket	1 pc. (Mounted)
3	Base gasket	1 pc. (Mounted)
4	Tie-rod for additional stations	4 pcs. (Included)

\* Refer to page 26 for ordering single unit.

## **⚠** Caution

- 1. Be sure to shut off the power and air supplies before disassembly.

  Furthermore, since air may remain inside the actuator, piping, and manifold, confirm that the air is completely exhausted before performing any work.
- 2. When disassembly and assembly are performed, air leakage may result if the tightening of the hexagon bolt with flange is inadequate.
- Rubber parts are attached to the metal parts of the washer. If they are misaligned or dislodged, return them to their normal position.

#### ■ Tube Releasing Tools (This tool is used for removing the tube from the 4(A) and 2(B) port.)

		, , , , , , , , , , , , , , , , , , , ,
Part no.	TG-0608	TG-1012
Applicable tubing O.D.	ø6/ø8	ø10/ø12

<sup>\*</sup> Tube releasing tools are not applicable for all port sizes.

For details on the tube removal procedure, refer to the JSY1000/3000/5000 Web Catalog.

The catalog can be viewed here.

<sup>\*1</sup> For the 4(A) and 2(B) port of ø8 or ø5/16", the same fitting is used for them.

<sup>\*2</sup> For the VENT port of ø4 and ø5/32", the same fitting is used for them.

<sup>\*1</sup> For the 4(A) and 2(B) port of Ø8 or Ø5/16", the same fitting is used for them.

<sup>\*2</sup> For the VENT port of ø4 and ø5/32", the same fitting is used for them.

# JSY5000-H Series Manifold Options

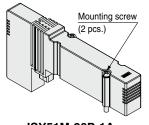

#### ■ Blanking plate

[With two mounting screws]

Used when valve additions are expected or for maintenance

#### Blanking plate (Single unit)

JSY51M - 26P - 1A

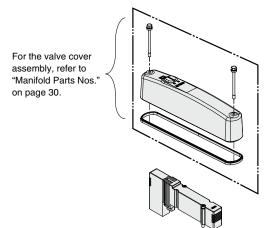

JSY51M-26P-1A

Valve cover assembly with blanking plate

# JSY51M - 26P - 1A C

#### ■SUP/EXH blocking disk

#### [SUP blocking disk]

By inserting the SUP blocking disk in the pressure supply passage of the manifold valve, can provide two different high and low pressure in one manifold.

#### [EXH blocking disk]

By inserting the EXH blocking disk in the exhaust passage of the manifold valve, can separate the exhaust from the valve so it does not affect the other valves. It can also be used for the manifold for the positive pressure and vacuum mixed manifold. (2 pieces are required to block EA/EB both sides of the EXH.)

\* When ordering a manifold, if the blocking disk is ordered at the same time in the manifold specifications, the laser printed blocking disk symbol will be displayed in the manifold block assembly that includes the blocking disk. Refer to the manifold block assembly on page 27 for the contents.

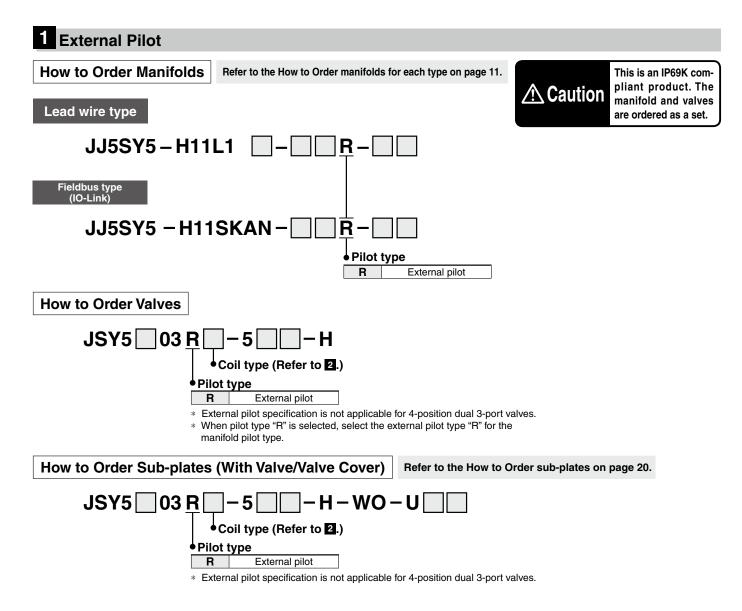

Series	SUP blocking disk	EXH blocking disk
<b>JSY5000</b> JSY51M-40P-2A		JSY51M-40P-2A

# **Made to Order**

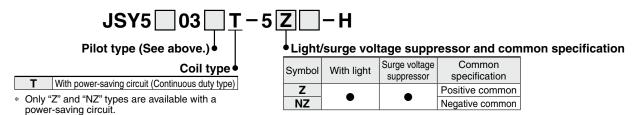

# 2 Coil Type: With Power-Saving Circuit (Continuous Duty Type, 0.1 W)

Be sure to select the power-saving circuit type when the valve is continuously energized for long periods of time. Be careful of the energizing time when the power-saving circuit is selected. Refer to page 37 for details.

#### **How to Order Valves**

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

#### Environment

# **\_**Marning

- 1. Do not use valves in atmospheres of corrosive gases, chemicals\*1, sea water, water vapor, or where there is direct contact with any of these.
  - \*1 Check section on cleaning and the product component list of the external materials used, and ensure compatibility with any chemicals used in the cleaning solution.
- 2. Avoid installing and using inside a food zone.
  - · Not installable

Food zone: An environment where food which will be sold as merchandize, directly touches the manifold parts

· Installable

Splash zone: An environment where food which will not be sold as merchandize, directly touches the manifold parts

Non-food zone: An environment where there is no contact with food

#### ■IP69K (IEC/EN 60529/ISO 20653) compliant product

- 1. IP69K is only guaranteed to the factory condition (finished as a manifold).
- 2. IP69K compliant products are protected against dust and high pressure hot water. However, when using the valve, keep within the ambient temperature and fluid temperature. (No freezing)
- 3. IPX9K compliant products are protected against dust and high pressure hot water jetwash.

When cleaning the manifold, it is recommended to keep the distance from the washer nozzle to the manifold at least 20 cm. Wash the manifold while moving the nozzle. Do not fix the cleaning point to one place.

4. Refer to the tightening torque in the disassembly drawing of the manifold (p. 25) when increasing or decreasing the number of stations for IP69K compliance. When installing the manifold, make sure that the gasket is not misaligned, forgotten to be attached, and that there are not foreign objects.

#### **How to Use**

# **∧**Caution

#### **■VENT** port

- A VENT port is installed on the manifold so that even if a valve leaks, the leaked pressure does not accumulate inside.
- 2. Prevent liquid from entering the VENT port.
- Do not block the VENT port. If the VENT port is used with the port closed, internal pressure may build up and the product gasket may come off and IP69K is not satisfied.
- 4. Do not pressurize the VENT port. The sealing performance of the gasket will be reduced and the IP69K may not be satisfied.
- 5. Do not pipe the VENT port and the exhaust port (3/5 port) in the same piping. The back pressure of the exhaust port may be applied to the VENT port, increasing the internal pressure.

#### **How to Use**

## 

#### ■ Metal One-touch fittings

 When tightening the hexagon socket head male connector, use a suitable hexagon wrench, and connect the piping carefully so as not to deform or damage the inside of the connector. If the inside of the connector is deformed or damaged, the falling out of tubes may occur.

Hexagon socket

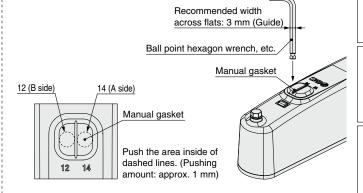

head male connector

- 2. Uni thread fittings cannot be used. When using Uni thread fittings, the tightening load on the chamfered part of the female thread on the manifold side can cause the female thread side to deform or break.
- Tighten fittings with the proper tightening torques in the table below.

Connection port		Connection thread size	Proper tightening torque [N·m]
VENT		M5	1 to 1.5
	X, PE	G1/8	2.9 to 3.2
	2(B), 4(A)	G1/4	5.7 to 6.3
Ì	1(P), 3(EB), 5(EA)	G1/2	14.3 to 15.8

#### ■ Manual override

Use a rounded tool (such as a ballpoint hex wrench) for manual override operations. Manipulating manual override with a sharp tool will damage the manual gasket and the IP69K is not satisfied.

#### **Valve/Manifold Parts Mounting**

# 

Mount it so that there is no slippage or deformation in gaskets, and tighten with the tightening torque shown below.

Thread size	Tightening torque	Tightening location
М3	0.8 N·m	Valve, Valve cover, SI unit
M4	1.4 N⋅m	End block
M6	4.9 N⋅m	Mounting leg (Option)
M6	4.9 N⋅m	Mounting leg (Option)

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

#### **Used as a 3-Port Valve**

# **⚠** Caution

#### ■In case of using a 5-port valve as a 3-port valve

The JSY5000 series can be used as normally closed (N.C.) or normally open (N.O.) 3-port valves by closing one of the cylinder ports 4(A) or 2(B) with a plug. However, they should be used with the exhaust ports kept open. Use them when a double solenoid type 3-port valve is required.

Plug position		B port	A port
Type of actuation		N.C.	N.O.
Number of solenoids	Single	(A)4 2(B)  ✓►	(A)4 2(B)  (EA)5 1 3(EB) (P)
	Double	(A)4 2(B) (EA)5 1 3(EB) (P)	(A)4 2(B)  (EA)5 1 3(EB)  (P)

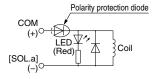

#### **Light/Surge Voltage Suppressor**

# **⚠** Caution

#### ■ Polar type

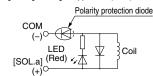

#### Positive common Single solenoid

Light/surge voltage suppressor (□Z)

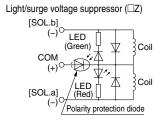

#### Negative common Single solenoid

Light/surge voltage suppressor (□NZ)

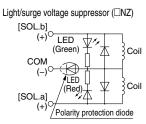

#### Positive common

# Double solenoid, 3-position, 4-position

# Negative common Double solenoid, 3-position,

# Double solenoid, 3-position 4-position

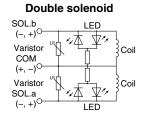

Serial transmission type is not applicable for the positive common.

#### ■ Non-polar type

With light/surge voltage suppressor (□U)
Single solenoid Doub

COM (+, -) Varistor SOLa

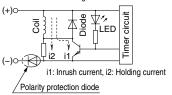

#### Light/Surge Voltage Suppressor

# **⚠** Caution

#### ■ With power-saving circuit (Made to order)

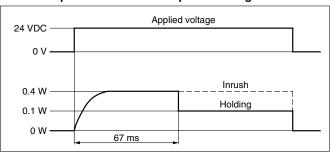

Power consumption is decreased to approx. 1/4 compared with the standard product by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 67 ms at 24 VDC.)

Electric circuit diagram (With power-saving circuit)
In the case of single solenoid

The circuit shown above reduces the power consumption for holding in order to save energy. Refer to the electrical power waveform as shown below.

#### <Electrical power waveform with power-saving circuit>

· Since the voltage will drop by approx. 0.5 V due to the transistor, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specifications of each type of valve.)

#### Residual voltage of the surge voltage suppressor

\* If a varistor or diode surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, refer to the table below and pay attention to the surge voltage protection on the controller side. Also, since the response time does change, refer to the response time on page 7.

#### **Residual Voltage**

Surge voltage suppressor	24 VDC
Z	Approx. 1 V
U	Approx. 47 V

#### **Continuous Duty**

# **\_**Caution

If a valve is energized continuously for long periods of time, the rise in temperature due to heat-up of the coil assembly may cause a decline in solenoid valve performance, reduce service life, or have adverse effects on peripheral equipment. If the valve is energized continuously or if the A side and B side of the dual 3-port valve are energized simultaneously, be sure to use a valve with power-saving circuit.

#### **Energization of a 2-Position Double Solenoid Valve**

# **∧**Caution

To avoid operation failure, do not energize the A side and B side of 2-position double solenoid valve at the same time.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

#### Countermeasure for Surge Voltage Intrusion

# **⚠** Caution

#### ■ Surge voltage intrusion

With non-polar type valves, at times of sudden interruption of the loading power supply, such as emergency shutdown, surge voltage intrusion may be generated from loading equipment with a large capacity (power consumption), and a valve in a de-energized state may switch over (see Fig. 1). When installing a breaker circuit for the loading power supply, consider using a valve with polarity (with polarity protection diode), or install a surge absorption diode between the loading equipment COM line and the output equipment COM line (see Fig. 2).

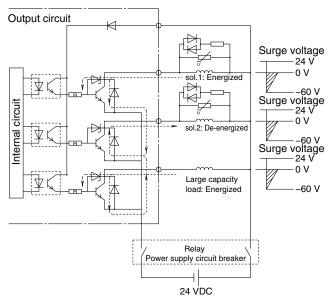

Fig. 1 Surge intrusion circuit example (NPN outlet example) (24 VDC)

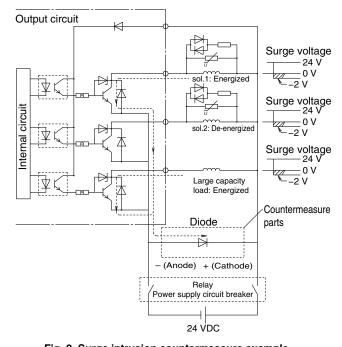

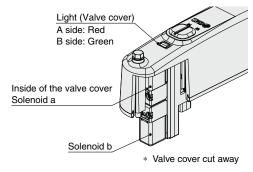

Fig. 2 Surge intrusion countermeasure example (NPN outlet example) (24 VDC)

#### **Light Indication**

# 

When equipped with indicator light and surge voltage suppressor, the light window turns red when solenoid a is energized, and it turns green when solenoid b is energized.

#### **Substrate inside Manifolds**

# **∧**Caution

The substrate inside of manifolds cannot be taken apart. Attempting to do so may damage parts.

#### **Other Tube Brands**

# **∧**Caution

1. When using other than SMC brand tube, confirm that the following specifications are satisfied with respect to the tube outside diameter tolerance.

1) Nylon tubing Within  $\pm 0.1$  mm 2) Soft nylon tubing Within  $\pm 0.1$  mm

3) Polyurethane tubing Within +0.15 mm, Within -0.2 mm Do not use tubing which does not satisfy the specified tubing O.D. accuracy, or tubing with an I.D., material, hardness, or surface roughness that differs from SMC's tubing. Please consult SMC if anything is unclear. It may cause difficulty in connecting the tubing, leakage, disconnection of the tubing, or fitting damage.

When used with tubing other than those from SMC, due to their properties, the KQG2 and KQB2 are not subject to warranty.

2. When using fittings other than those from SMC, be certain to confirm that the operating conditions are such that no problems will arise.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

#### One-touch Fittings

## **∧**Caution

#### ■Installation and removal of tubing for One-touch fittings

#### 1) Installation of tubing

- (1) Cut the tubing perpendicularly, being careful not to damage the outside surface. Use an SMC tube cutter TK-1, 2, 3, 5, or 6. Do not cut the tubing with pliers, nippers, scissors, etc., otherwise the tubing will be deformed and problems may result. Allow some extra length in the tube.
- (2) The outside diameter of the polyurethane tubing swells when internal pressure is applied to it. Therefore, it may be impossible to re-insert the tubing into the One-touch fitting. Check the tubing outside diameter, and when the accuracy of the outside diameter is +0.07 mm or larger for Ø2, +0.15 mm or larger for other sizes, re-insert it into the One-touch fitting without cutting the tubing. When the tubing is re-inserted into the One-touch fitting, confirm that the tubing goes through the release button smoothly.
- (3) Grasp the tubing, and slowly push it straight (0 to 5°) into the One-touch fitting until it comes to a stop.
- (4) Pull the tubing back gently to make sure it has a positive seal. Insufficient installation may cause air to leak or the tubing to release.

As a guide for checking if the tubing is pulled out or not, refer to the following table.

Tubing size	Tensile force of tubing [N]
ø2, ø3.2, ø1/8"	5
ø4, ø5/32", ø3/16"	8
ø6, ø1/4"	12
ø8, ø5/16"	20
ø10, ø3/8"	30
ø12, ø1/2"	35
ø16	50

#### 2) Removal of tubing

Use the release tool when the removal of tube is difficult due to the tube size. Refer to page 33 for releasing tools.

- (1) Push the release button flange evenly and sufficiently to release the tube. Do not push in the tubing before pressing the release button.
- (2) Pull out the tubing while keeping the release button depressed. If the release button is not held down sufficiently, the tubing cannot be withdrawn.
- (3) To reuse the tubing, remove the previously lodged portion of the tubing. If the lodged portion is left on without being removed, it may result in air leakage and make the removal of the tubing difficult.

#### Installation

# **⚠**Caution

Even though the inlet pressure is within the operating pressure range, when the piping diameter is restricted due to size reduction of supply port 1(P), the flow will be insufficient. In this case, the valve does not switch completely and the cylinder may malfunction.

#### **Maintenance**

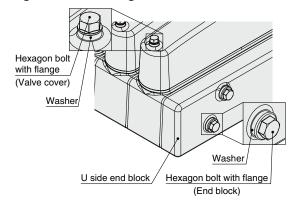

# **⚠**Caution

 Regular inspection and tightening of the hexagon bolts with flange is recommended at 3 months intervals, to satisfy IP69K. (Recommended inspection interval: 3 months)

For the tightening location and tightening torque, see the exploded view of the manifold (p. 25).

Please replace the washer if it is damaged.

- When disassembling by removing the hexagon bolt with flange, make sure that there is not moisture on the outer surface of the product. If the product is disassembled or assembled with moisture attached, moisture may enter the inside of the manifold and cause damage.
- 3. Make sure that the washers are in good condition, in position and assembled when tightening the hexagon bolt with flange.

# EX430 Series **Specific Product Precautions 1**

Be sure to read this before handling the products.

Refer to the back cover and the "Operation Manual" for safety instructions.

#### **Design / Selection**

# **∕** Warning

1. Do not use beyond the specification range.

Using beyond the specification range may result in a fire, malfunction, or damage to the system.

Check the specifications before operation.

- 2. When using for an interlock circuit:
  - Provide a multiple interlock system which is operated by another system (such as a mechanical protection function).
  - Perform an inspection to confirm that it is working properly.

Failure to do so may result in possible injuries due to mal-

# **∕** Caution

1. Use within the specified voltage range.

Using beyond the specified voltage range is likely to cause product damage or malfunction.

2. Do not install in places where it can be used as a foothold.

Applying any excessive load such as stepping on the product by mistake or placing a foot on it will cause it to break.

3. Keep the surrounding space free for maintenance.

When designing a system, take into consideration the amount of free space needed to perform maintenance.

4. Beware of inrush currents when the power supply is turned on.

Some connected loads can apply an initial charge current which will trigger the over current protection function, causing the product to malfunction.

#### Mounting

# Caution

- 1. When handling and assembling products:
  - Do not apply excessive force to the product when disassembling.

The connecting parts of the product are firmly joined with

- · When joining units, take care not to get your fingers caught between the products.
  - Injury may result.

2. Do not drop, bump, or apply excessive impact to the product.

Doing so may result in damage, equipment failure, or malfunc-

#### Mounting

## **⚠** Caution

3. Observe the tightening torque range.

Tightening outside of the allowable torque range will likely damage the screw.

IP69K cannot be guaranteed if the screws are not tightened to the specified torque.

4. When lifting a large solenoid valve manifold, take care to avoid causing stress to the valve connection joint.

The connection parts of the product may be damaged. Because the product may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.

5. When installing the product, mount it on a flat sur-

Torsion in the whole product may lead to problems such as air leakage or contact failure.

#### Wiring

# **⚠** Caution

1. Avoid repeatedly bending or stretching the cable and applying heavy objects or force to it.

Wiring where repeated bending and tensile stress are applied to the cable may result in circuit breakage.

2. Avoid miswiring.

If miswired, there is a danger of malfunction or damage to the

3. Do not wire while energizing the product.

There is a danger of malfunction or damage to the product or input/output device.

4. Avoid wiring the power line and high-voltage line in parallel.

Signal line noise or surge from the power line or high-pressure line could cause a malfunction.

Wiring of the product or input/output device and the power line or high-voltage line should be separated from each other.

5. Check the wiring insulation.

Defective insulation (contact with other circuits, improper insulation between terminals, etc.) may cause damage to the product or input/output device due to excessive voltage or cur-

# **Specific Product Precautions 2**

Be sure to read this before handling the products.

Refer to the back cover and the "Operation Manual" for safety instructions.

#### Wiring

# 

6. When the product is installed in machinery/equipment, provide adequate protection against noise by using noise filters, etc.

Noise in signal lines may cause a malfunction.

7. When connecting wires, prevent the entry of water, solvent, or oil from the connector section.

Failure to do so may result in damage, equipment failure, or malfunction.

8. Avoid wiring patterns in which excessive stress is applied to the connector.

Failure to do so may result in equipment failure or malfunction due to contact failure.

#### **Operating Environment**

# **⚠** Warning

1. Do not use in atmospheres containing inflammable or explosive gases.

Use in such atmospheres is likely to cause a fire or explosion. This product is not explosion proof.

# **⚠** Caution

1. Provide adequate protection when operating in locations such as the following.

Failure to do so may cause a malfunction or equipment failure. The effect of countermeasures should be checked in individual equipment and machines.

- 1) Where noise is generated by static electricity, etc.
- 2) Where there is a strong electric field
- 3) Where there is a danger of exposure to radiation
- 4) When in close proximity to power lines or high-voltage lines
- 2. Do not use in environments where oil and chemicals are used.

Operating in environments where coolants, cleaning solvents, various oils, or chemicals are present may cause adverse effects (damage, malfunction, etc.) to the product even within a short period of time.

3. Do not use in environments where the product could be exposed to corrosive gases or liquids.

Use in such environments may cause product damage or malfunction.

#### **Operating Environment**

## **⚠** Caution

4. Select the proper type of enclosure according to the operating environment.

IP69K is achieved when the following conditions are met.

- 1) Provide appropriate wiring using communication cables with M12 connectors.
- 2) Appropriately mount the SI unit and the manifold valve.
- Do not use in locations with sources of surge generation.

Installation of the product in an area around equipment (electromagnetic lifters, high-frequency induction furnaces, welding machines, motors, etc.) which generates large surge voltages could cause an internal circuitry element of the product to deteriorate or result in damage. Implement countermeasures against the surge from the generating source, and avoid contact between the lines.

When directly driving a load which generates a surge voltage by relay, solenoid valve, or lamp, use a load that has an integrated surge-absorption element.

When a surge generating load is directly driven, the product may be damaged.

- The product is CE/UKCA marked but not immune to lightning strikes. Take measures against lightning strikes in your system.
- 8. Keep dust, wire scraps, and other foreign matter from entering the product.

Such materials may cause equipment failure or malfunction.

9. Mount the product in a location, which is not affected by vibration or shock.

Failure to do so may cause equipment failure or malfunction.

10. Do not use in direct sunlight.

This may cause equipment failure or malfunction.

**11. Use within the ambient temperature range.** Failure to do so may cause a malfunction.

12. Do not use in places where radiated heat may af-

fect the product.

Such places are likely to cause a malfunction.

# **EX430** Series Specific Product Precautions 3

Be sure to read this before handling the products. Refer to the back cover and the "Operation Manual" for safety instructions.

#### Adjustment / Operation

# **⚠** Warning

Do not perform operation or setting with wet hands.
 There is a risk of electrical shock.

# 

1. Use a watchmaker's screwdriver with a thin blade for the setting switch.

When setting the switch, do not touch any unrelated parts. This may cause parts damage or malfunction due to a short circuit.

2. Perform appropriate setting for the operating conditions.

Failure to do so could result in malfunction.

Refer to the Operation Manual for details on setting each switch.

3. For details on programming and address setting, refer to the manual from the PLC manufacturer.

The programming content related to the protocol is designed by the manufacturer of the PLC used.

#### Maintenance

# **⚠** Warning

1. Do not disassemble, modify (including circuit board replacement), or repair this product.

Such actions are likely to cause injuries or equipment failure.

- 2. When an inspection is performed:
  - Turn off the power supply.
  - Stop the air supply, exhaust the residual pressure in the piping, and confirm that the air has been released before performing maintenance work.

Failure to do so may result in the unexpected malfunction of system components or injury.

# **⚠** Caution

- When removing from/attaching to the valve manifold:
  - Do not apply excessive force to the unit.
     The connecting parts are firmly joined with seals.
  - Take care not to get your fingers caught.
     Injury may result.
- 2. Perform periodic inspection.

Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.

3. After maintenance, make sure to perform an appropriate functionality inspection.

When abnormalities such as faulty operation occur, stop operation immediately. Unexpected malfunction in the system composition devices is likely to occur.

4. Do not use benzine or thinner for cleaning the product

Damage to the surface or erasure of the display may result. Wipe off any stains with a soft cloth.

If the stain is persistent, soak a cloth in a dilute solution of neutral detergent, wring it out sufficiently, wipe the product, and then finish with a dry cloth.

### Other

# 

 Refer to the catalog of each series for Common Precautions and Specific Product Precautions for valve manifolds.

# **⚠** Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

Caution: Caution indicates a hazard with a low level of risk which, If not avoided, could result in minor or moderate injury.

-----

Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger: Danger indicates a nazaru wiun a nigin level on the first avoided, will result in death or serious injury. **Danger** indicates a hazard with a high level of risk which, \*1) ISO 4414: Pneumatic fluid power - General rules relating to systems.

ISO 4413: Hydraulic fluid power – General rules relating to systems.

IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety.

#### **⚠** Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

- 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
- 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
- 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
- 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
- 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

#### **⚠** Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

#### Limited warranty and Disclaimer/ **Compliance Requirements**

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

#### **Limited warranty and Disclaimer**

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2) Also, the product may have specified durability, running distance or
- replacement parts. Please consult your nearest sales branch. 2. For any failure or damage reported within the warranty period which is clearly our
- responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
  - 2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

#### **⚠** Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.
