Air Slide Table Reversible Type ø6, ø8, ø12, ø16, ø20, ø25

Series MXQR

Piping and adjuster positions can be changed on site to suit the installation conditions.

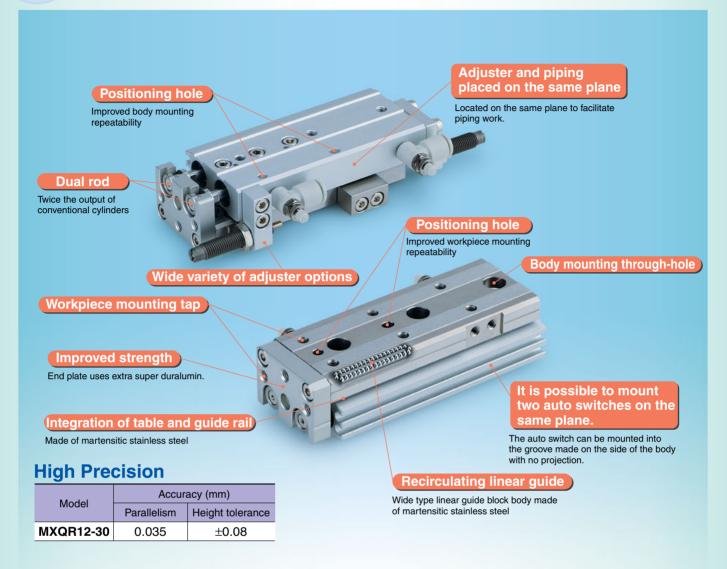

Integration of the guide rail and the table

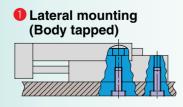

Uses a recirculating linear guide for high rigidity and high precision.

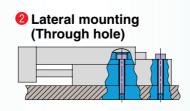

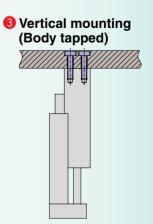

Air Slide Table/Interchangeable with the air slide table MXQ series.

The body and workpiece mounting dimensions are interchangeable with those of the MXQ series.

Three types of mounting. Wider choice of mounting variations facilitates installation.

∕∕SMC

Shock absorber (soft type/short stroke RJ) can be mounted. (ø8 to ø25)

Shock absorber (RB) can be mounted on ø6.

Improved cycle time, suitable for short strokes.

Selection

A Caution

1. Operate loads within the range of the operating limits.

Select the model considering maximum load weight and allowable moment. Refer to front matters 1 and 2 for the details. When actuator is used outside of operating limits, eccentric loads on guide will be in excess of this causing vibration on guide, inaccuracy, and shortened life.

2. If intermediate stops by external stopper is done, avoid ejection.

If lurching occurs damage can result. When making a stop with an external stopper to be followed by continued forward movement, first supply pressure to momentarily reverse the table, then retract the intermediate stopper, and finally apply pressure to the opposite port to operate the table again.

Operating Environment

ACaution

1. Do not use in the environment, where the product could be exposed to the liquid such as cutting oil, etc.

Using in the environment where the product could be exposed to cutting oil, coolant or oil, etc. could result in looseness, increased operating resistance, or air leakage, etc.

2. Do not use in the environment, where the product could be exposed directly to the foreign matters such as powder dust, blown dust, cutting chip, spatter, etc.

This could result in looseness and increased operating resistance, and air leakage, etc.

Please consult with SMC regarding use in this kind of environment.

3. Use caution for the anticorrosiveness of linear guide section.

Martensitic stainless steel is used for the table and guide block. But, use caution that anti-corrosiveness is inferior to the austenitic stainless steel. Especially, rust may be generated in an environment where waterdrops are likely to adhere due to condensation, etc.

Note) The buffer time depends on the operating conditions (maximum load weight, moment, piston speed and operating pressure and temperature).

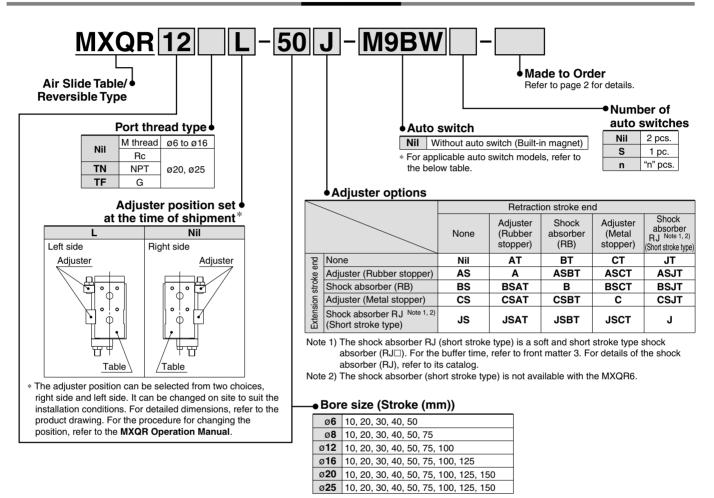

Test conditions Workpiece weight: Approx. 70% of maximum load weight Speed : Average speed with the fitting directly

ed : Average speed with the fitting directly mounted (Approx. 300 to 500 mm/s depending on the bore size and operating pressure)

Moisture Control Tube Series IDK

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to Series IDK in the WEB catalog.

Optional Specifications

Adjusters

Three different types of adjusting bolt have been standardized for extension stroke end, retraction stroke end and both ends adjuster and cushion mechanisms.

Rubber stopper

Standard stroke adjuster

Shock absorber

Absorbs the impact at the stroke end for smooth stopping. Improved stopping accuracy.

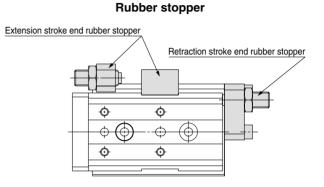

Metal stopper

Improved stopping accuracy. Without cushioning function for use with light loads and low speeds.

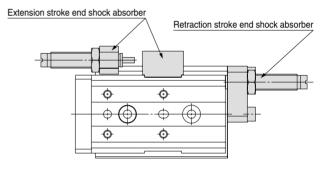

Stroke Adjustment Range

Туре	Description	Stroke adjustment range		
	Extension stroke end (AS)			
Rubber stopper	Retraction stroke end (AT)	0 to 5 mm		
	Both ends (A)			
	Extension stroke end (BS, JS)			
Shock absorber	Retraction stroke end (BT, JT)	Refer to "Dimensions".		
	Both ends (B, J)			
	Extension stroke end (CS)			
Metal stopper	Retraction stroke end (CT)	0 to 5 mm		
	Both ends (C)			

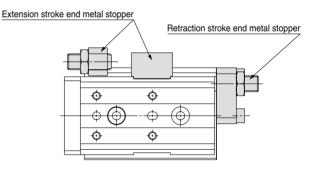

* Adjusters with wide adjustable range are available as option with rubber stopper and metal stopper. For detailed specifications, refer to "How to Order Stroke Adjuster (Accessories)" below.

Weight (g)			15	5	23	65	5	

Note) The shock absorber service life is different from that of the MXQR cylinder depending on the operating conditions. Refer to the RB/RJ series Specific Product Precautions for the replacement period.

Service Life and Replacement Period of Shock Absorber

Allowable operating cycle under the specifications set in this catalog is shown below. 1.2 million cycles RB0604-X2062, RB08□□

1.2 million cycles	RB0604-X2062, RB08
2 million cycles	RB10□□ to RB14□□
3 million cycles	RJ0805 to RJ1410

Note) Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.

Applicable size	Shock absorber model					
MXQR 6	RB0604-X2062	—				
MXQR 8	RB0805	BJ0805				
MXQR12	RB0806	HJ0805				
MXQR16	RB1007	RJ1006				
MXQR20	RB1411	BJ1410				
MXQR25	RB1412	RJ1410				

≜Caution

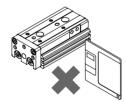

1. Do not scratch or dent the mounting side of the body, table or end plate.

This can cause loss of parallelism in the mounting surfaces, vibration in the guide unit and increased operating resistance, etc.

2. Do not scratch or dent on the forward side of the rail or guide. This could result in looseness and increased operating resistance, etc.

- 3. Do not apply excessive power and load when a workpiece is mounted. If the external force more than the allowable moment were applied, looseness of the guide unit or increased operating resistance could take place.
- 4. Flatness of mounting surface should be 0.02 mm or less. Poor parallelism of the workpiece mounted on the body, base and other parts can cause vibration in the guide unit and increased operating resistance, etc.
- 5. Keep away from objects which are influenced by magnets. As the body magnets are built-in, do not allow close contact with magnetic disks, magnetic cards or magnetic tapes. Data may be erased.

6. Do not touch a magnet to the table section.

Since the table is made from the magnetic substance, it could turn to be magnetized if it stuck by a magnet, etc. That could cause auto switches, etc. to malfunction.

7. When mounting the body, use screws with appropriate length and do not exceed the maximum tightening torque. Tightening with a torque above the limit could malfunction. Whereas, tightening insufficiently could result in misalignment or come to a drop.

1. Lateral Mounting (Body tapped) Maximum tightening Maximum screw-in Model Bolt torque (N·m) depth (*t* mm) MXQR 6 M4 x 0.7 2.1 8 MXQR 8 M4 x 0.7 2.1 8 MXQR12 M5 x 0.8 10 4.4 **MXQR16** | M6 x 1 7.4 12 MXQR20 M6 x 1 7.4 12 MXQR25 M8 x 1.25 18.0 16

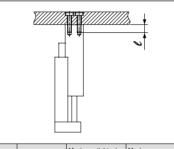

2. Lateral Mounting (Through hole)

Mounting

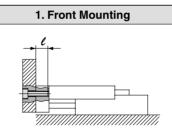

Model	Bolt	Maximum tightening torque (N⋅m)	Maximum screw-ir depth (<i>t</i> mm)		
MXQR 6	M3 x 0.5	1.2	11.5		
MXQR 8	M3 x 0.5	1.2	13.5		
MXQR12	M4 x 0.7	2.8	17.4

MXQR16	M5 x 0.8	4.4	7		
MXQR20	M5 x 0.8	4.4	8		
MXQR25	M6 x 1	7.4	10		

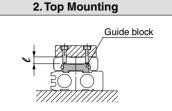

▲ Caution

To prevent the workpiece fixing bolts from touching the end plate, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the end plate and cause malfunction, etc.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth (<i>t</i> mm)
MXQR 6	M3 x 0.5	0.9	5
MXQR 8	M4 x 0.7	2.1	6
MXQR12	M5 x 0.8	4.4	8
MXQR16	M6 x 1	7.4	10

MXQR25	M8 x 1.25	18.0	15

多SMC

▲ Caution

To prevent the workpiece holding bolts from touching the guide block, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the guide block and cause malfunction, etc.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth (<i>t</i> mm)
MXQR 6	M3 x 0.5	1.2	4
MXQR 8	M3 x 0.5	1.2	4.8
MXQR12	M4 x 0.7	2.8	6
MXQR16	M5 x 0.8	5.7	7
MXQR20	M5 x 0.8	5.7	9.5
MXQR25	M6 x 1	10.0	11.5

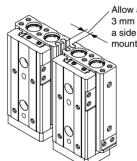

8. The positioning hole on the table and the positioning hole at the bottom of the body do not have the same center. Use these holes during reinstallation after the table has been removed for the maintenance of an identical product.

Handling of Adjuster when Mounted on the Left

≜Caution

1. Keep at least 3 mm between adjusters mounted on the right and left when they are side by side.

Otherwise, this could cause auto switches to malfunction.

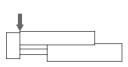

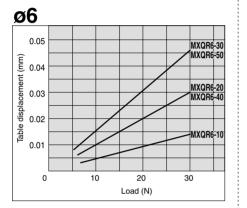

Allow a space of 3 mm or more for a side by side mounting.

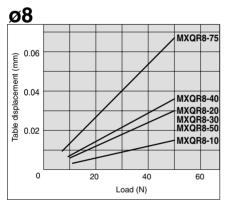

Table Deflection (Reference Values)

Table displacement due to pitch moment load

Table displacement when loads are applied to the section marked with the arrow at the full stroke.

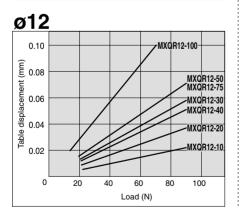

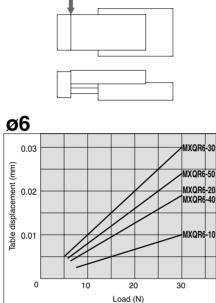

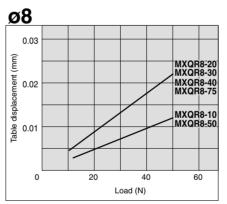

Table displacement due to yaw moment load

Table displacement when loads are applied to the section marked with the arrow at the full stroke.

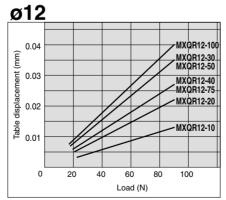

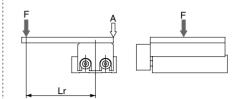

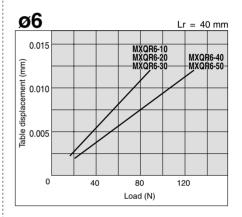

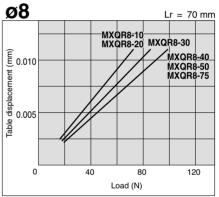

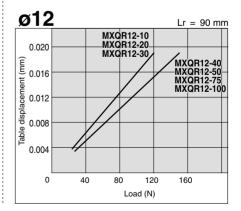

Table displacement due to roll moment load

Table displacement of section A when loads are applied to the section F with the slide table retracted.

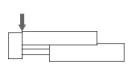

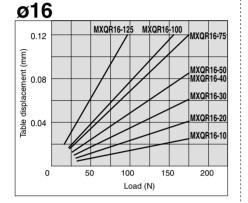

Air Slide Table/Reversible Type Series MXQR

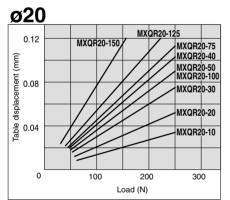

The below graphs show the table displacement when the static moment load is applied to the table. The graphs do not show the loadable weight. Refer to Model Selection for the loadable weight.

Caution for Adjuster Options

∧ Caution

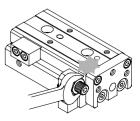

1. Do not replace with the bolt the other than original adjustment bolt.

This could result in looseness and damage due to impact forces, etc.

2. Follow the table on the right for tightening torque of lock nuts. Insufficient torque will cause a decrease in the positioning accuracy.

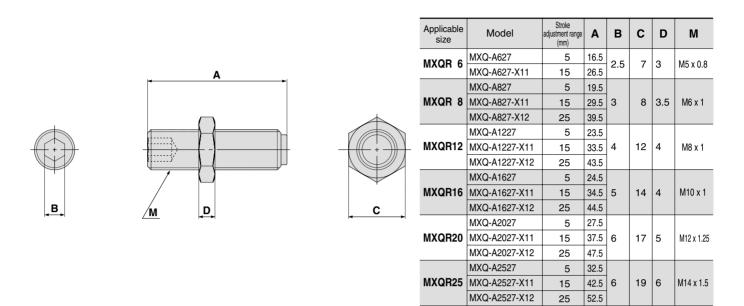

3. When stroke adjuster is adjusted, do not hit the table with the wrench. This could result in looseness.

Refer to the MXQR Operation Manual for details.

Note) Adjust the auto switch after confirming the operating conditions in the actual setting. (): D-A93

Auto Switch Mounting

\land Caution

Auto switch mounting tool

• When tightening the set screw (included with auto switch), use a watchmaker's screwdriver with a handle about 5 to 6 mm in diameter.

I

* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approximately $\pm 30\%$ dispersion). It may vary substantially depending on the ambient environment.

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted. * Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) and solid state auto switch (D-F8) are also available. Refer to Best Pneumatics No. 3 for details.

Prior to Use Auto Switch Connection and Example

Source Input Specifications

Sink Input Specifications

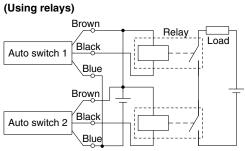

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

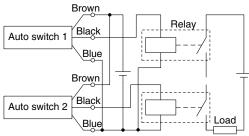

Example of AND (Series) and OR (Parallel) Connection

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

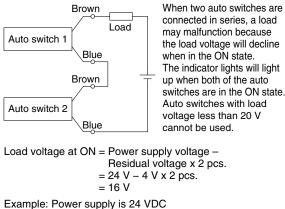

3-wire AND connection for NPN output

3-wire AND connection for PNP output (Using relays)

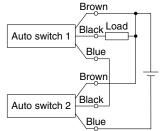

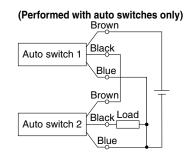

2-wire AND connection

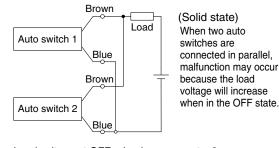

Example: Power supply is 24 VDC Internal voltage drop in auto switch is 4 V.

(Performed with auto switches only)

2-wire OR connection

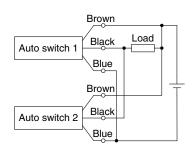

SMC

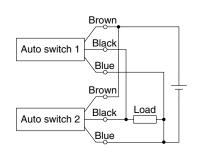

Example: Load impedance is 3 k Ω . Leakage current from auto switch is 1 mA.

3-wire OR connection for NPN output

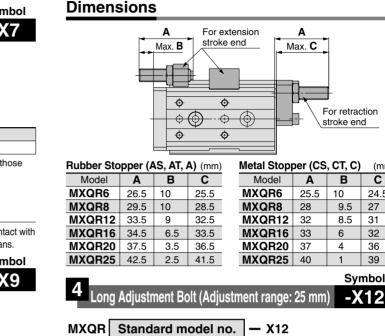

3-wire OR connection for PNP output

(Reed)

Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

Made to Order Individual Specifications: Air Slide Table/Reversible Type Please contact SMC for Made to detailed dimensions, specifications, Order Series MXQR and lead times.

Long adjustment bolt

39

(Adjustment range: 25 mm)

*-X12 is not available with the MXQR6. *-X12 is not available with those with a shock absorber (JS, JT, J, BS, BT, B).

The stroke adjustment range was extended from 5 mm to 25 mm with a long adjustment bolt.

Dimensions

Heat treated chrome-molybdenum steel (SCM435) stroke adjusting thread is used to reduce wearing of metal stopper.

Specifications

opecifications	
Туре	Heat treated metal stopper bolt
Bore size (mm)	6, 8, 12, 16, 20, 25
Piston speed	50 to 200 mm/s
Cushion	None
Stroke adjustment range	0 to 5 mm
·	•

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

Symbol

MXQR Standard model no.

PTFE grease

¥7

PTFE grease is used for all parts that grease is applied.

Specifications

Туре	PTFE grease				
Bore size (mm) 6, 8, 12, 16, 20, 25					

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

Marning Warning **Precautions**

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Sy	ymbol
or Food Processing Equipment	-X9
ndard model no. – X9	
	Λ3

Grease for food processing equipment

Grease for food processing equipment is used for all parts that grease is applied.

Specifications

Туре	Grease for food processing machines (NSF-H1 certified)/ Aluminum complex soap base grease
Bore size (mm)	6, 8, 12, 16, 20, 25

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

A Caution

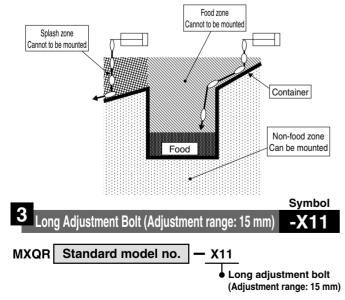

Do not use this cylinder in a food-related environment. <Cannot be mounted>

Food zone Food may directly contact with this cylinder, and is treated as food products.

Splash zone ·Food may directly contact with this cylinder, but is not treated as food products.

<Can be mounted>

Non-food zone This cylinder do not directly contact food.

*-X11 is not available with those with a shock absorber (JS, JT, J, BS, BT, B).

The stroke adjustment range was extended from 5 mm to 15 mm with a long adjustment bolt.

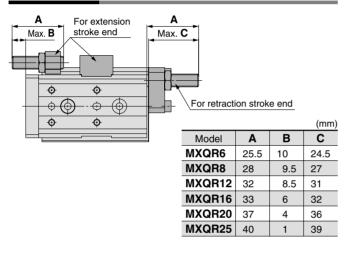

Made to Order Individual Specifications: Air Slide Table/Reversible Type Please contact SMC for Made to detailed dimensions, specifications, Series MXQR and lead times.

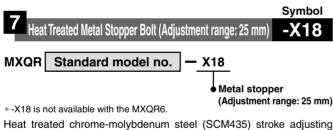

Metal stopper (Adjustment range: 15 mm)

Heat treated chrome-molybdenum steel (SCM435) stroke adjusting thread is used to reduce wearing of metal stopper. The stroke adjustment range was extended from 5 mm to 15 mm with a long adjustment bolt.

Dimensions

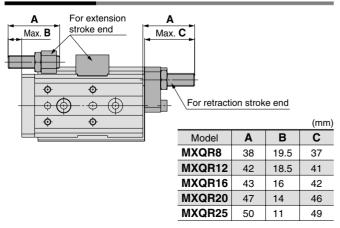

thread is used to reduce wearing of metal stopper. The stroke adjustment range was extended from 5 mm to 25 mm with

a long adjustment bolt.

Dimensions

MXQR Standard model no. - X33

Without built-in auto switch magnet

This product does not have a magnet for an auto switch. It is suitable for applications where magnetic force is not acceptable.

Specifications

Туре	Without built-in auto switch magnet
Bore size (mm)	6, 8, 12, 16, 20, 25
Auto switch	Not mountable

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

Fluororubber seal

Change the materials for the piston seal, rod seal, O-rings and scrapers (rubber lined parts) to fluororubber.

Specifications

Туре	Fluororubber seal
Bore size (mm)	6, 8, 12, 16, 20, 25
Seal material	Fluororubber

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

10	Symbol
10 Anti-corrosive Guide Unit	-X42
MXQR Standard model no. – X42	

Anti-corrosive guide unit

Martensitic stainless steel is used for table and guide block. Use this treatment if more effective anti-corrosiveness is necessary. Table and guide block are given anti-corrosive treatment.

Specifications

Туре	Anti-corrosive guide unit	
Bore size (mm)	6, 8, 12, 16, 20, 25	
Surface treatment	Surface treatment Special anti-corrosive treatment *2	

Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

*2 Special anti-corrosive treatment makes the table and the guide block black.

	Symbol
EPDM Seal	-X45

Standard model no. MXQR

- X45

Change the materials for the piston seal, rod seal, O-rings and scrapers (rubber lined parts) to EPDM.

Specifications

Туре	EPDM seal
Bore size (mm)	6, 8, 12, 16, 20, 25
Seal material	EPDM
Grease	PTFE grease

* Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

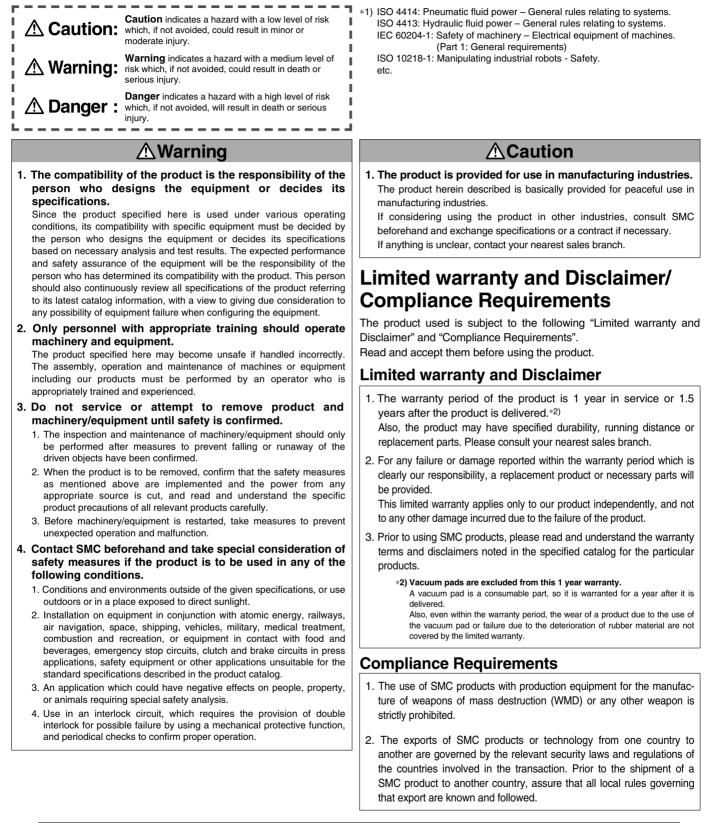

\land Warning Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)^{*1}, and other safety regulations.

A Safety Instructions Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
