Type 2 Gateway type

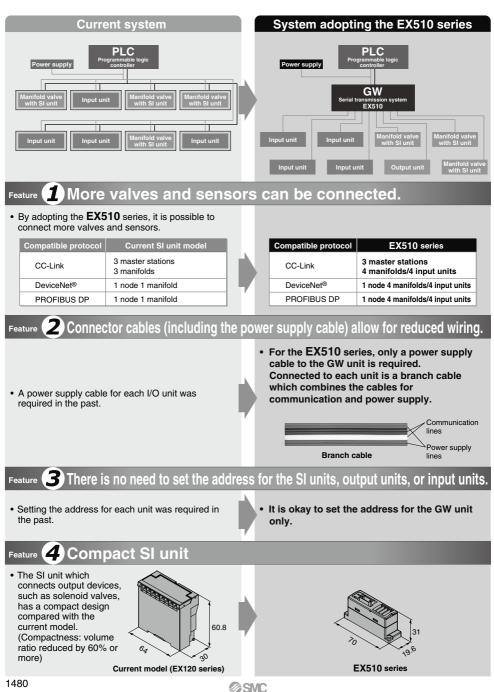

Fieldbus System (GW System, 4 Branches)

EX510 Series

Features of the EX510 Series

Feature **5** Allows for the easy change of Fieldbusses

- In the past, all the part numbers of I/O units needed to be changed by returning them to the manufacturer and reordering (re-estimate, redelivery) them.
- For the EX510 series, only the GW unit needs to be changed.

Feature 6 Adopts connectors which do not require any special tools for installation

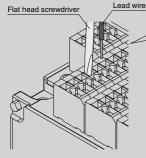

No special tools are required for press-fitting the connectors for branch cable connections or for the e-con connectors for sensor connections.

No need to strip the wires Only pliers are required for clamping.

The output unit adopts a spring type terminal box, eliminating the need to tighten any retaining screws.

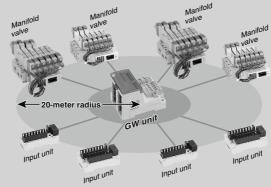

Feature

Torque control and crimping work is unnecessary. Screwless construction with no tightening of retaining screws required

7 Cable lengths of up to 20 meters are available.

Various units can be connected within a radius of 20 meters around the GW unit.

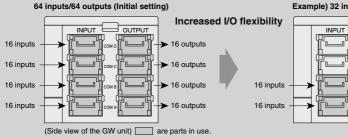

Feature 8 Delay in transmission of 1 ms or less

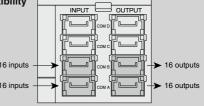

The delay in transmission between the GW unit and SI units/output units/input units is 1 ms or less.

Feature 9 Increased I/O flexibility

The occupying number of points in the GW unit can be configured flexibly by setting a switch.

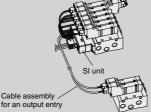

Example) 32 inputs/32 outputs

* Setting is different depending on the respective protocol. Refer to the specifications for details.

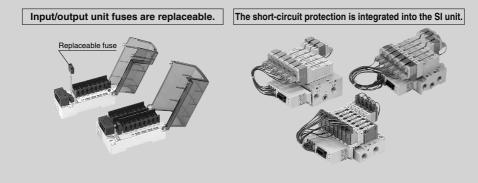

Feature 10 Effective use made of the unused points of the SI unit

Valves which are independent from the manifold can be converted to serial transmission without purchasing new SI units.

Feature **11** Protection

Each unit is protected against short-circuits from power supply loads.

Parts Description

Terminating resistor (1 pc.) * Attached to EX510-GPR1 only

Accessories

GW	Unit

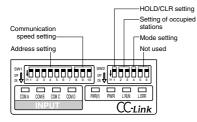

GW	Unit	
No.	Description	Applications
1	Communication socket (BUS)	For connecting with a network, using the communication connector $(\bar{(0)}),$ which is part of the accessories
2	Power supply socket (PWR(V))	Supplies power for output devices, which have a power supply connector $(\bar{(1)}),$ such as a solenoid valve
3	Power supply socket (PWR)	Supplies power for input devices, which have a power supply connector $(\bar{\rm (1)}),$ such as a sensor
4	Branch connector (for input) on GW unit side	Connects input units, etc., using a branch cable (EX510-FC□□)
5	Branch connector (for output) on GW unit side	Connects the SI unit (manifold valves) etc., using the branch cable (EX510-FC $\Box\Box$)
6	FG terminal	Used for grounding
7	Mounting hole	Used for mounting the unit with two M4 screws
8	Mounting groove for DIN rail	Used for mounting the unit to a DIN rail
9	Display, Switch setting part	Displays the LED corresponding to the unit's condition, address setting, and the communication speed for the switches
10	Communication connector	Used for connecting the network cable
11	Power supply connector	Used for connecting the power supply cable
12	Terminating resistor	Connects the terminating resistor to both ends of a unit in the transmission line

Connection to Output Equipment

The output unit can be connected to 2-port solenoid valves such as the VX, VCW, VDW series and other 3-port valves. Pay attention to the applicable cable and maximum load current for selecting a solenoid valve. The 2-port valves other than shown below can be used as long as they meet the conditions; operating environment (enclosure, etc.), applicable cable and the maximum load current. Shown below is the typical 2-port solenoid valve. Additionally, we recommend a model with surge voltage suppressor is used for the 2-port solenoid valve.

Example) In the case of using 5 VX23 series (rated voltage: 24 VDC/ Load Current Requirement power consumption: 10.5 W) (calculated under the condition

Model EX510-DYN3 EX510-DYP3 EX510-DYN4 EX510-DYP4 with 5 valves turned on simultaneously) Output type Sink/NPN (Positive common) Source/PNP (Negative common) Sink/NPN (Positive common) Source/PNP (Negative common) Operating current per point for a valve Power supply type Internal power supply (supplied by GW unit) External power supply (supplied by power supply connector) 10.5 (W) ÷ 24 (V) = 0.44 (A) Meets the output unit load current requirement 1. Meet the following 3 conditions: Meet the following 3 conditions: 1. 0.5 A or less per point 1. 0.5 A or less per point Therefore, the total current of the output unit is: 1 A or less per unit 2. 3 A or less per unit Max, load 10.5 (W) ÷ 24 (V) x 5 (pcs.) = 2.2 (A) Only the external 3. Total current for OUT 0 to 3. Total current for OUT 0 to power supply type can meet the requirement 2. The current 7 must be 1 A or less. 7 must be 1.5 A or less. internal power supply type cannot be used. Total current for OUT 8 to Total current for OUT 8 to 15 must be 1 A or less. 15 must be 1.5 A or less. Based on the requirement 3, The total current for OUT0 to 7

and OUT8 to 15 are 1.5 (A) respectively. Therefore, 3 VX valves are wired for either 3 points of OUT0 to 7. (1.32 (A) for OUT0 to 7)

2 VX valves are wired for either 2 points of OUT8 to 15. (0.88 (A) for OUT8 to 15)

Other outputs can be made available by reducing the total number of the occupied points for simultaneous operation.

Direct Operated 2-Port Solenoid Valve

Accessories

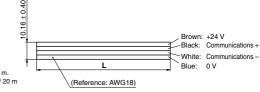

Branch cable

A 4 core flat cable is required for connecting between units.

How to Order

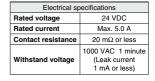

Branch connector (Unit 1 pc.)

Connector required for connecting a branch cable to each unit. Two branch cables are attached to the SI unit, the input unit and the output unit respectively.

How to Order EX510-LC1

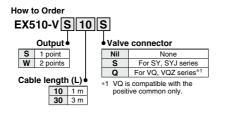

(When press-fitting)

Cable assembly for outputting

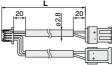

Cable assembly for connecting the unused outputs in the SI unit.

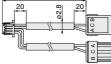

EX510-VSDQ

e-con connector

Connector for connecting a sensor to the input unit (EX510-DXDD). For applicable wire, refer to the right table.

SMC part no. (1 pc.)	Cover color	Compliant wire diameter (ø)	Nominal cross sectional area (mm ²)*1	OMRON Corp. part no.
_	Clear	UP to 1.5	0.08 to 0.5 (AWG28 to 20*2)	XN2A-1470

*1 Nominal sectional area is the value provided by the manufacturer.

*2 AWG size is a reference

Accessories

6 Replacement fuse

Replacement fuse for the input unit (EX510-DX \Box) and the output unit (EX510-DY \Box).

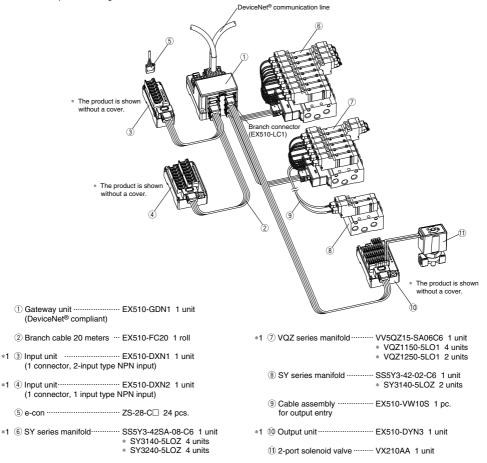

Electrical specifications		
Part no.	EX9-FU10	EX9-FU50
Applicable model	EX510-DX	EX510-DY□4
Rated current	1 A	5 A
Rated insulation capacity	48 VAC/DC 50 A	
Fuse resistance value	0.145 Ω	18 mΩ

Ordering Examples

1502

Shown is an example for ordering the EX510 series.

*1 Two branch connectors are attached to the manifold with SI unit and two are attached to the input unit and the output unit respectively. The branch connector (EX510-LC1) is used to connect the individual units.

Fieldbus System GW System, 4 Branches **EX510 Series**

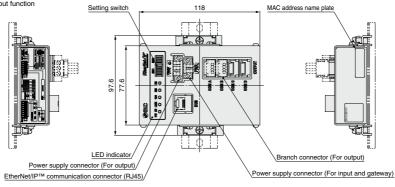

Made to Order

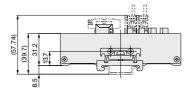

Please contact SMC for detailed specifications and lead times.

① EtherNet/IP™ compatible

EX510-GEN1-X73

. 64 outputs (16 inputs x 4 branches) Without input function

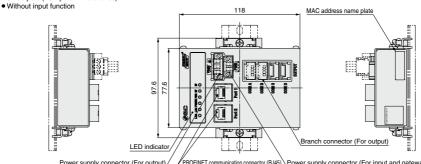

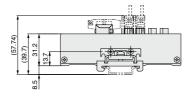

2 PROFINET compatible

EX510-GPN1-X73

. 64 outputs (16 inputs x 4 branches)

ation connector (RJ45) Power supply connector (For output) Power supply connector (For input and gateway)

EX510 Series Specific Product Precautions

Be sure to read this before handling the products. Refer to page 7 for safety instructions and pages 15 to 17 for fieldbus system precautions.

Operating Environment

Warning

1. Do not use this product in the presence of dust, particles, water, chemicals, and oil.

Use with such materials is likely to cause a malfunction or breakage.

Adjustment / Operation

Warning

1. Do not short-circuit a load.

If a load is short-circuited, excessive can cause damage to the connected devices. The fuse of the input unit will melt and below. The output and SI unit will activate its overcurrent protection function. However, they cannot cover all modes, so damage is likely to occur.
