## **High Pressure Coolant Valve**

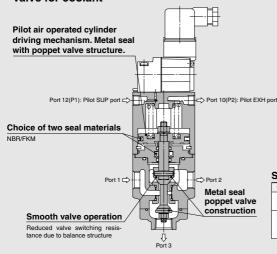

## **VNH** Series

## 3.5 MPa, 7.0 MPa

## Corresponding to high speed grinding and long drilling processes

Coolant valve for high pressure coolant liquid (up to 3.5 MPa or 7.0 MPa) that is ideal for lubrication, dust blowing and cooling. Valve for coolant

#### Series

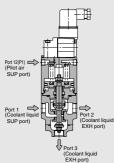

Operating fluid pressure	Port	Port size Rc
3.5 MPa	3 Port	3/8(10A), 1/2(15A) 3/4(20A), 1(25A)
7.0 MPa	2 port (Large flow type) 3 Port	3/8(10A), 1/2(15A) 3/4(20A), 1(25A)

## ··· Application Example

## 3 port valve (3.5 MPa, 7.0 MPa) Ex. 1) 3 port valve: Reducing load to pump

## Piping

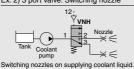

Inlet side (supply side): port 1, Outlet side (exhaust side): port 2 and port 3. Supply pilot air higher than 0.25 MPa to port 12(P1).

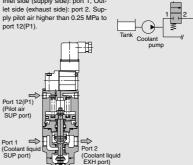

Coolant Stop valve gump For reducing load to pump, coolant liquid is returned from B port to tank each time.

Ex. 2) 3 port valve: Switching nozzle

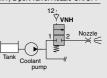

## 2 port valve (7.0 MPa)

Inlet side (supply side): port 1, Out-

Ex.1) 2 port valve: Nozzle ON/OFF

## Construction

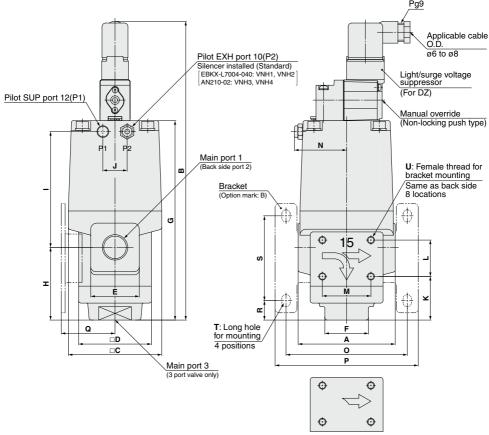

## **Working Principle**

When the pilot operated solenoid valve 1 is not energized, the valve element A 5 connected to the piston 7 is closed by the return spring 8. Then valve element B 6 connected to the valve element A 5 is open. When the pilot operated solenoid valve 1 is energized (or when pressurized air enters through the port 12(P1) of the air operated type), the pilot air supplied to the bottom of the piston 7 moves upward to open the valve element A 5 and closes the valve element B 6.

# VNH Series Specific Product Precautions

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## Design

## **⚠** Warning

#### 1. Extended periods of continuous energization

If a valve is continuously energized for long periods, heat generation of the coil may result in reduced performance and shorter service life. This may also have an adverse effect on the peripheral equipment in proximity. Should a valve be continuously energized for long periods, or its daily energized state exceeds its non energized state, please use a valve with DC specifications. Additionally, when using with AC, energizing for long periods of time continuously, select the air-operated valve and use the continuous duty type of the VT307 for a pilot valve.

## Mounting

## 

1. Do not apply external force to the coil section.

When tightening is performed, apply a wrench or other tool to the outside of the piping connection parts.

Do not warm the coil assembly with a heat insulator, etc.

Use tape, heaters, etc., for freeze prevention on the piping and body only. They can cause the  $\mbox{coil}$  to burn out.

- Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.
- 4. When mounted in the vertical downward direction, foreign matter can remain in the plate assembly part if there are foreign matters in the coolant. For this reason, avoid mounting in the vertical downward direction as much as possible.
- 5. Mount the VNH series vertically top side up.

#### **Piping**

## **⚠** Caution

#### 1. Applied voltage

When electric power is connected to a solenoid valve, be careful to apply the proper voltage. Improper voltage may cause malfunction or coil damage.

### 2. Confirm the connections.

After completing the wiring, confirm that the connections are correct.

### **Piping**

## 

When high temperature fluids are used, use fittings and tubing with heat resistant features.

(Self-align fittings, PTFE tubing, Copper tubing, etc.)

## **Mounting Direction of Pilot Solenoid Valve**

## **⚠** Warning

With external pilot solenoids, the pilot solenoid valves are not splash proof specifications, and so care must be taken not to get fluid on oneself such as when performing maintenance.

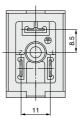

## **∧** Caution

#### Direction of mounting

When replacing a valve, if an external pilot solenoid valve is mounted in the wrong direction, it may malfunction or leak air.

#### Pitch between terminals of the DIN terminal

Refer to the drawing below for the pitch between terminals of the DIN terminal.

## **External Pilot**

## **.** Caution

### Pilot port piping

12 (P1) and 10 (P2) piping should be as follows according to the model

Port	Air operated	Solenoid			
12 (P1)	External pilot	External pilot			
10 (P2)	Bleed port	Pilot exhaust			

### Fluid quality

## 

Please note that using fluids that contain foreign mterial (especially hard objects like glass chips), may cause damage to the valve, will reduce sealing performance, and may cause early failure.

## Back Pressure of 3 Port Valve (VNH series)

## **.** Caution

 Ensure that back pressure of 3 port from VNH□13 is less than 5 MPa.
