# $180^{\circ}$ Angular Type Air Gripper 

# Cam Type <br> Rack \& Pinion Type <br> MHY2/MHW2 Series 

## MHY2 Series/Cam Type

## Light and compact size in small bore sizes

| Model | Bore size <br> $(\mathrm{mm})$ | Gripping moment * <br> ( $\mathrm{N} \cdot \mathrm{m})$ | Over length $\mathrm{L}(\mathrm{mm})$ | Weight <br> $(\mathrm{g})$ |
| :---: | :---: | :---: | :---: | :---: |
| MHY2-10D | 10 | 0.16 | 71 | 70 |
| MHY2-16D | 16 | 0.54 | 84 | 150 |
| MHY2-20D | 20 | 1.10 | 106 | 320 |
| MHY2-25D | 25 | 2.28 | 131 | 560 |

* At the pressure of 0.5 MPa

Improved mounting repeatability

Resistance to dusty environments
Reduced opening sizes helps prevent foreign objects from entering.

Series Variations

## MHW2 Series/Rack \& Pinion Type

Unique seal design allows shorter total length
 construction and constant grippng force when opening and closing fingers. (PAT.PEND)

Auto switch mounting at 4 locations

| Model | Bore size <br> $(\mathrm{mm})$ | Gripping moment <br> $(\mathrm{N} \cdot \mathrm{m})$ | Over length $\mathrm{L}(\mathrm{mm})$ | Weight <br> $(\mathrm{g})$ |

## MHY2/MHW2 Series Model Selection

## Model Selection

Selection Procedure

| ep 1 gripping force | Step 2 gripping point | 3 |
| :---: | :---: | :---: |

## Step 1 Confirmation of Gripping Force

## Effective Gripping Force

## MHY2/MHW2 Series Double Acting

- Indication of effective grippng force

The effective gripping force shown in the graphs to the right is expressed as $F$, which is the impellent force of one finger, when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

- Workpiece should be held at a point within the range of overhanging distance $(\mathrm{H})$ for a given pressure indicated in the tables on the right.
- When the workpiece is held at a point outside of the recommended range for a given pressure, it may cause adverse effect on the product life.

## MHY2/MHW2 Series <br> Model Selection

## Step 3 Confirmation of Moment of Inertia of Attachments

Confirm the moment of inertia for the attachment at one side. Calculate the moment of inertia for A and B separately as shown in the figures on the right.

| Procedure | Calculation | Calculation example |
| :---: | :---: | :---: |
| 1. Check the operating conditions, dimensions of attachment, etc. |  | Operating model: MHY2-16D <br> Opening time: 0.15 s <br> $\mathbf{a}=40(\mathrm{~mm})$ <br> $\mathbf{b}=7(\mathrm{~mm})$ <br> c $=8(\mathrm{~mm})$ <br> $\mathbf{d}=5(\mathrm{~mm})$ <br> e $=10(\mathrm{~mm})$ <br> $\mathrm{f}=12(\mathrm{~mm})$ |
| 2. Calculate the moment of inertia of attachment. | A part <br> Calculation of weight $\mathrm{m}_{1}=\mathrm{a} \times \mathrm{bx} \times \times$ Specific gravity <br> Moment of inertia around $Z_{1}$ axis $\mathrm{Iz} 1=\left\{m_{1}\left(a^{2}+b^{2}\right) / 12\right\} \times \frac{10^{-6}}{*}$ <br> Moment of inertia around $Z$ axis $\mathrm{I}_{\mathrm{A}}=\mathrm{I} \mathrm{z}_{1}+\mathrm{m}_{1} \mathrm{r}_{1}{ }^{2} \times \frac{10^{-6}}{*}$ <br> B part <br> Calculation of weight $\mathrm{m}_{2}=\mathrm{dxexf} \mathrm{x}$ Specific gravity <br> Moment of inertia around $Z_{2}$ axis $\mathrm{Iz} 2=\left\{\mathrm{m}_{2}\left(\mathrm{~d}^{2}+\mathrm{e}^{2}\right) / 12\right\} \times \frac{10^{-6}}{*}$ <br> Moment of inertia around $Z$ axis $\mathrm{IB}=\mathrm{Iz2}+\mathrm{m}_{2} \mathrm{r}^{2}{ }^{2} \times \frac{10^{-6}}{*}$ <br> Total moment of inertia $\mathrm{I}=\mathrm{I} \mathrm{~A}+\mathrm{IB} \quad(* \text { Constant for unit conversion })$ | Material of attachment: Aluminum alloy (Specific gravity $=2.7$ ) $\begin{aligned} \mathbf{r}_{1} & =37(\mathrm{~mm}) \\ \mathbf{m}_{1} & =40 \times 7 \times 8 \times 2.7 \times 10^{-6} \\ & =0.006(\mathrm{~kg}) \end{aligned}$ $\begin{aligned} \mathrm{Iz} 1 & =\left\{0.006 \times\left(40^{2}+7^{2}\right) / 12\right\} \times 10^{-6} \\ & =0.8 \times 10^{-6}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right) \\ \mathrm{IA} & =0.8 \times 10^{-6}+0.006 \times 37^{2} \times 10^{-6} \\ & =9.0 \times 10^{-6}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right) \end{aligned}$ $\mathbf{r}_{2}=47(\mathrm{~mm})$ $\begin{aligned} \mathbf{m}_{\mathbf{2}} & =5 \times 10 \times 12 \times 2.7 \times 10^{-6} \\ & =0.002(\mathrm{~kg}) \end{aligned}$ $\begin{aligned} \mathrm{Iz2} & =\left\{0.002 \times\left(5^{2}+10^{2}\right) / 12\right\} \times 10^{-6} \\ & =0.02 \times 10^{-6}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right) \\ \mathrm{IB} & =0.02 \times 10^{-6}+0.002 \times 47^{2} \times 10^{-6} \\ & =4.4 \times 10^{-6}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right) \\ \mathrm{I} & =9.0 \times 10^{-6}+4.4 \times 10^{-6} \\ & =13.4 \times 10^{-6}=0.13 \times 10^{-4}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right) \end{aligned}$ |
| 3. Determine the allowable moment of inertia from the graph. | MHY2-16D | The moment of inertia is determined to be $0.9 \times 10^{-4}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right)$ according to the operating time $(0.15 \mathrm{~s})$ from the graph to the left. |
| 4. Confirm the moment of inertia of one attachment is within the allowable range. | Moment of inertia of attachment < Allowable moment of inertia | $0.13 \times 10-4\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right)<0.9 \times 10^{-4}\left(\mathrm{~kg} \cdot \mathrm{~m}^{2}\right)$ Possible to use this model MHY2-16D completely. |

## Symbol

| Symbol | Definition | Unit |
| :--- | :--- | :---: |
| $\mathbf{Z}$ | Finger rotation axis | - |
| $\mathbf{Z}_{1}$ | Axis on the center gravity of A part of attachment and parallel to $\mathbf{Z}$ | - |
| $\mathbf{Z Z}_{2}$ | Axis on the center gravity of B part of attachment and parallel to Z | - |
| I | Total moment of inertia for attachment | $\mathrm{kg} \cdot \mathrm{m}^{2}$ |
| $\mathrm{IZ1}$ | Inertia moment around the $\mathbf{Z}_{1}$ axis of A part of attachment | $\mathrm{kg} \cdot \mathrm{m}^{2}$ |
| $\mathrm{IZ2}$ | Inertia moment around the $\mathbf{Z} 2$ axis of B part of attachment | $\mathrm{kg} \cdot \mathrm{m}^{2}$ |

| Symbol | Definition | Unit |
| :--- | :--- | :---: |
| IA | Moment of inertia around the $Z$ axis of A part of attachment | $\mathrm{kg} \cdot \mathrm{m}^{2}$ |
| IB | Moment of inertia around the $Z$ axis of B part of attachment | $\mathrm{kg} \cdot \mathrm{m}^{2}$ |
| $\mathbf{m}_{\mathbf{1}}$ | Weight of A part of attachment | kg |
| $\mathbf{m}_{\mathbf{2}}$ | Weight of B part of attachment | kg |
| $\mathbf{r} \mathbf{1}$ | Distance between $\mathbf{Z}$ and $Z 1$ axis | mm |
| $\mathbf{r}_{\mathbf{2}}$ | Distance between $Z$ and $Z 2$ axis | mm |

Moisture Control Tube IDK Series
When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the IDK series in the Best Pneumatics No. 6.
