SMC
Instruction Manual
Analogue Auto switch and Sensor monitor
D-MH1AD(V) and D-MH1B\# series

The intended use of the auto switch is to detect and control the position sing magnetic detection.

## 1 Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger," They are all important notes for safety and must be followed in addition
to International Standards (ISO//EC) ${ }^{\text {1) }}$ I) International Standards (ISO/IEC) 1 , and other safety regulations. ISO 4413: Hydraulic fluid power - General rules relating to systems. IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
industrial robots -Safety. etc.

- Refer to product catalogue, Operation Manual and Handling - Keep this manual in a safe place for future reference.

| A Caution | Caution indicates a hazard with a low level of risk which, if <br> not avoided, could result in minor or moderate injury. |
| :---: | :---: |
| A Warning | Warning indicates a aharard with a medium level of fisk <br> which, if not vavoidd, could result in death or serious injury. |
| A Danger | Danger indicates a hazard with a high level of risk which, if <br> not avoided, will result in death or serious injury. |

## A Warning

- Always ensure compliance with relevant safety laws and standards.
All work must be carried out in a safe manner by a qualified person in compliance with applicable national regulations.
- This product is class A equipment intended for use in an industrial environment. There may be potential difficulties in ensuring electromagnetic compatibility in other environments due to conducted or radiated disturbances.
Refer to the operation manual on the SMC website (URL:
https://www.smcworld.com) for more Safety Instructions. htps.//www.smcworld.com) for more Safety Instructions. those shown in the specifications section. Contact SMC for specific drawings.

| 2 Specifications |  |
| :---: | :---: |
| 2.1 Analogue Auto Switch specifications |  |
| Model | D-MH1AD(V) |
| Power supply voltage | 12 to 24 VDC $\pm 10 \%$ ripple max. $10 \%$ p-p (with polarity protection) |
| Current consumption | 10 mA or less |
| Output specification | Analogue voltage output: 1 to 5 V |
| Output impedance | Approx. $1 \mathrm{k} \Omega$ |
| Output repeatability | $\pm 20 \mathrm{mV}{ }^{11}$ (at $25^{\circ} \mathrm{C}$ ) |
| Output temperature characteristics (at $25^{\circ} \mathrm{C}$ ) | $\pm 80 \mathrm{mV}\left(-10 \text { to } 60^{\circ} \mathrm{C}\right)^{* 2}$ |
| Operating time | 1 ms or less |
| Electrical entry method | Grommet |
| Impact resistance | $1000 \mathrm{~m} / \mathrm{s}^{2}$ |
| Insulation resistance | $50 \mathrm{M} \Omega$ or more at 500 VDC mega |
| Withstand voltage | 1000 VAC for 1 min . (between case and cable) |
| Ambient temperature | -10 to $60^{\circ} \mathrm{C}$ |
| Enclosure protection | IP67 to IEC 60529 (JISC0920) |

*1: Single switch unit output characteristics. When the mounting rienturbance in the surroundings Excluding a deformation of the wor
*2: Single switch unit output characteristics. The effect of fluctuations in the magnetic force of the magnet itself is excluded.

Do not apply a ferromagnetic field which exceeds 200 [mT] to the analogue auto switch Otherwise, it may no longer operate normally.

| Model |  | D-MH1B\# |
| :---: | :---: | :---: |
| Applicable sensor |  | D-MH1AD(V)\# |
| Rated pressure range |  | 1000 to 5000 [mV] |
| Display and settable range |  | 800 to 5200 [mV] |
| Display and minimum set unit |  | 2 [mV] |
|  | Power supply voltage | $\begin{gathered} 12 \text { to } 24 \mathrm{VDC} \pm 10 \% \text {, ripple max. } 10 \% \text { p-p } \\ \text { (with polarity protection) } \end{gathered}$ |
|  | Current consumption | 35 mA or less |
|  | Display accuracy | $\pm 20 \mathrm{mV} \pm 1$ digit (constant at $25^{\circ} \mathrm{C}$ ) |
|  | Repeatability | $\pm 4 \mathrm{mV} \pm 1$ digits |
|  | Temperature characteristics | $\pm 20 \mathrm{mV}$ ( $25^{\circ} \mathrm{C}$ standard) |
|  | Output specification | Select from NPN or PNP open collector 2 output |
|  | Output mode | Select from 2 setting or 3 setting mode |
|  | Switch operation | Select from normal or reversed output |
|  | Maximum load current | 80 mA |
|  | Max. applied voltage (NPN only) | 30 VDC |
|  | Internal voltage drop (residual voltage) | NPN: 1 V or less ( 80 mA load current) <br> PNP: 1.5 V or less ( 80 mA load current) |
|  | Delay time ${ }^{* 1}$ | 1.5 ms or less (anti-chatter function: can be set from 0.00 to 5.00 sec .) (smallest settable increment: 0.01 sec .) |
|  | Hysteresis | Variable between 0 to 2200 (initial value: 20 mV ) |
|  | Protection | Over current protection |

| Model |  | D-MH1B\# |
| :---: | :---: | :---: |
|  | Input type | Voltage input: 1 to 5 VDC (input impedance: $1 \mathrm{M} \Omega$ ) |
|  | Number of inputs | 1 input |
|  | Connection method | Connector (e-CON) |
|  | Protection | Over voltage protection (up to 26.4 V ) |
|  | Display method | LCD |
|  | Number of displays | 1 main display and 2 sub displays |
|  | Display colour | Main display: red or green Sub display: orange |
| Digital filter ${ }^{2+3}$ |  | 0, 10, 50, 100, $500,1000,5000 \mathrm{~ms}$ |
|  | Enclosure protection | IP40 |
|  | Withstand voltage | 1000 VAC for 1 minute between terminals and housing |
|  | Insulation resistance | $50 \mathrm{M} \Omega$ or more between terminals and housing (with 500 VDC megger) |
|  | Temperature range | Operation: 0 to $50^{\circ} \mathrm{C}$ Storage: - -10 to $60^{\circ} \mathrm{C}$ (No condensation or freezing) |
|  | Humidity range | Operation and Storage: 35 to $85 \%$ RH (no condensation) |
| $\begin{array}{\|l} \hline \stackrel{\rightharpoonup}{5} \\ \frac{\stackrel{\rightharpoonup}{0}}{3} \end{array}$ | Product | 25 g (without power/output lead wire) |
|  | Lead wire with connector | 39 g (part number ZS-46-5L) |

*1: Value without a digital filter (at 0 ms )
*2: It is $90 \%$ response time in relation to the step input.
*3: Display, switch output and analogue response time are affected.
*4: Any products with tiny scratches or smears on the appearance or isplay colour or accuracy variation which do not affect the

## 3 Name and function of parts

3.1 Analogue auto switch

3.2 Display Sensor Monitor

| Item | Description |
| :--- | :--- |
| Operation LED | Displays the switch operating condition. |
| LCD Display | Displays the current analogue voltage, setting <br> mode status and error code. <br> The display method can be selected from four <br> types at the top area of the screen: always red, <br> always green, switching from green to red in <br> conjunction with the output, and switching from <br> red to green in conjunction wwith the output. <br> The bottom area of the display is orange. |
| UP button | Use this button to select the mode and increase <br> the ON or OFF set value. |
| SET button | Press this button to change the mode and <br> confirm settings. |
| DOWN button | Use this button to select the mode and decrease <br> the ON or OFF set value. |

## 4 Installation

### 4.1 Installation

- Do not install the and understood. Read the specific
product may be damaged or malfunction if it is used correctly. The specification range.
The product cannot be used for stroke length measurement. magnet as an analogwitch outputs a magnetic field from the cylinder the cylinder stroke
adsion, The individual differences in the magetic force of
magnets. As such, the output values from magnets are different even if they are mounted to the same position on the same type actuator. - The resolution and repeatability vary depending on the position The affected by the ambient temperature, mounting orientation (terrestria magnetism), wobbling (mechanical factor, supply pressure fluctuation, etc.), electrical noise disturbance, magnetic body (iron screw, iron
powder, etc.), or a magnetic force. It is recommended to use nonmagnetic materials for magnetic bodies, screws, in the surrounding area.
- When using the product for an application where the ambient temperature or mounting orientation conanges greatly, it is
recommended to set the ON point under conditions that are close to the actual operating environment and set a wider ON width or the actual opera
- Take precautions when multiple cylinders or actuators are used close together.
When using two or more cylinders or actuators with a built-in magnet will maintain a separation distance of at least 40 mm (if the separation distance is specified for each cylinder/actuator series, use that value).
- Prevent reverse current from entering the product when the wire
breaks down or the product is forced to operate for operation checks.
- Do not use a load which generates a surge voltage. When a surgegenerating load s
surge protection.
- The analogue auto switch output voltage will be unstable for 50 [ms] after power is supplied. The sensor monitor starts the switch output operation within approximately 200 [ms] after power is supplied. Consider these times before using the product.
Provide a rotation stopper for the cylinder/actuator piston rod
Use a guide to stop the piston rod rotation or select an SMC product the rotation stopper.

## D-\#S-TF223-039EN

## 4 Installation (continued)

4.2 Environment

## A. Warning

- Do not use in an environment where corrosive gases, oil content, chemicals, salt water or steam are present.
- Do not use in water, or an environment where condensation occurs, or other environments where water is constantly sprayed
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover
- Do not install in a location subject to vibration or impact in excess of Do not mount in a location
temperatures in excess of the product specifications.
- Do not mount in a place where static electricity is a problem.
- Do not use in an area where surges are generated.
- Do not use in a welding environment
- Do not use in an environment with cyclic temperature changes.

Do
4.3 Mounting precautions

- Do not drop or apply an impact to the product.
- Observe the recommended tightening torque for mounting.

If tightened at a torque higher than the specified torque range the cylinder/actuator body, mounting screws, mounting brackets, and product body, etc. may be damaged.
If tightened at a torque below the specified tightening torque range, the Do not carry the product by holding the may be misaligned.
switch or the display sensor monitor.
Do not use screws other than the screws installed in the analogue auto switch for fixing.
Adjust the ounting position of the analogue auto switch after checking the actual operating conditions.
4.4 Analogue auto switch mounting

- When mounting an analogue auto switch, check that the corresponding to the cylinder/actuator
- A mounting bracket is not necessary for some sensors
- The mounting method depends on the cylinder/actuator type and tube inner diameter.
When tightening the mounting screws, use a cross head screwdriver With \#0 blad
to $0.25 \mathrm{~N} \cdot \mathrm{~m}$.

4.5 Display Sensor Monitor mounting
4.5.1 Mounting with Bracket
- Mount the bracket to the sensor monitor using mounting self-tapping screws (nominal size $3 \times 8 \mathrm{~L}(2 \mathrm{pcs})$ ), then set the product in the - Tighten the bracket mounting screws to a torque of 0.45 to $0.55 \mathrm{~N} \cdot \mathrm{~m}$.

## 4 Installation (continued)

- Be aware that since self-tapping screws are used, they should not be mounted or removed more than once.

4.5.2 Mounting with panel mount adapter
- Mount part (a) to the front of the product and fix it. Then insert the body into the panel until (a) comes into contact with the panel front surface. - Next, mount part (b) to the product from the rear and insert it until (b) is in contact with the panel for fixing.
- Panel mount adapter + Front protective cover (Part No.: ZS-46-D)

4.5.3 Removal of panel mount adapter
- When removing the sensor monitor with panel mount adapter from the
installation, pull it forward while opening the hooks on each side as shown.
If the panel mount adapter is pulled forward with the hook caught, the damaged.

## 5 Wiring

5.1 Wiring

## A Caution

- Do not perform wiring while the power is on
- Check the insulation of the wiring
roue for the product wiring and any power or high
- Avoid repeatedly bending or stressing lead wires.

Broken lead wires can result from wiring layouts which repeatedly apply bending stress or tensile force to the lead wires.
If a commercially available switching power supply is used, be sure to ground the frame ground (FG) terminal. If the switching power supply not be able to meet the product specifications. In that case, insert a noise filter such as a line noise filter/ferrite between the switching power supplies or change the switching power supply to a series power - Mapply.

- Make wiring as short as possible to prevent noise and surges from entering the product. Use a wiring length of less than 30 m .
Also, wire the DC (-), line (blue wire) as close as possible to the power supply.

## 5 Wiring (continued

5.2 Auto switch wiring

*: The figure in the parentheses () indicates the connector pin number.

| Connector pin number | Wire colour | Description |
| :---: | :---: | :---: |
| 1 | Brown | Power supply DC (+) |
| 3 | Blue | Power supply DC (-) |
| 4 | Black | Analogue (1 to 5 V ) output |

5.2.1 Pin assignment (pre-wired connector)

M8 3-pin connector
M8 4-pin connector M12 4-pin connector
*: A pre-wired connector cannot directly be connected to the sensor monitor.

### 5.3 Sensor Monitor wiring

NPN (2 output) specification

PNP (2 output) specification

5.3.1 Power and Output Connector

5 Wiring (continued)
5.4 Analogue auto switch to sensor monitor connection

- Prepare the analogue Outer sheath 20 mm minimum auto switch cable as

The cut the insulator.
The wire of the corresponding
colour shown in the table is
Insulator
number marked on the sensor connector.

| Connector marking No. | Wire colour |
| :---: | :---: |
| 1 | Brown (DC (+)) |
| 2 | Not connected |
| 3 | Blue (DC (-)) |
| 4 | Black (OUT: 1 to 5 V ) |

- Ensure that the above-mentioned preparation work has been performed correctly, and press part "A" by hand to make temporary connection.

- Press part "A" centre straight in using a suitable tool, such as pliers - The sensor connector cannot be re-used once crimped. For a connection failure such as incorrect order of wire or incomplete insertion, use a new connector.
If the sensor is not connected correctly, "LLL" will be displayed on the sensor monitor.
5.5 Compatible Sensor connectors

| Connector <br> part No. | Conductor cross <br> sectional area $\left(\mathrm{mm}^{2}\right)$ | Outside <br> diameter $(\mathrm{mm})$ | Colour of <br> cover |
| :---: | :---: | :---: | :---: |
| $\mathrm{ZS}-28-\mathrm{C}$ | 0.14 to 0.2 | $\phi 0.8$ to $\phi 1.0$ | Red |
| $\mathrm{ZS}-28-\mathrm{CA}-2$ | 0.1 to 0.5 | $\phi 0.9$ to $\phi 1.0$ |  |

5.6 Connection Attachment / Detachment

- When mounting the connector, insert it straight onto the pins, holding the lever and connector body, and lock the connec
lever hook into the concave groove on the housing
- To detach the connector, remove the hook from the groove by pressing
the lever downward, and pull the connector straight out.

D-\#S-TF223-039EN

## 6 Outline of Settings <br> <br> Power is supplied

 <br> <br> Power is supplied}The product code is displayed for approximately 3 seconds after power is supplied. Then, measurement mode will be displayed
*: The switch operation starts within approx. 0.2 seconds.
[Initial setting]
Set the output specifications, including NPN or PNP setting, and
select the output setting mode.

| select the output setting mode |
| :---: |
| [Measurement mode] |

The state in which the voltage is displayed and switch operation is performed for the analogue auto switch after power is supplied. This is the basic mode; other modes should be selected for set
point changes and other function settings.
1 Tmitu

| $\left[\begin{array}{l}\text { [3 Step } \\ \text { setting } \\ \text { mode] }\end{array}\right.$ |
| :---: |
| [Simple <br> setting <br> mode] |
| [Function <br> selection <br> mode] |
| Other <br> Settings |

*: The output continues to operate during setting.
If the button is not operated for a certain period of time during setting, setting)
A setting in 3 step setting mode, simple setting mode, or function

## 73 Step Setting mode

In this mode, the set values can be input in just 3 steps.
Use this mode if the product is to be used immediately, after changing
only the set values (the current voltage is displayed on the main display). In 3 step setting mode, the set values (SP1, SP2, SP3 $3^{*}$ ) can be changed. *: The setting is possible only in 3 step setting mode. DOWN button. Follow the operation below.

1. Press the SET button once when the item to be changed is displayed on the sub display. The set value on the sub display (right) will start ashing.

2 Press the UP or DOWN button to change the set value
The UP button is to increase and the DOWN button is to decrease.

- Press the UP button once to increase by one digit, or press and hold to continuously increase.

- Press the DOWN button once to decrease by one digit, or press and hold to continuously decreas

3. Press the SET button to finish the setting

The set value can be deleted by pressing the SET and DOWN buttons simultaneously for 1 second or longer.

## 8 Simple Setting mode

In simple setting mode, the set value (SP1 to SP3 ${ }^{\circ}$ ) and the delay time (dt) can be changed while checking the current voltage value (main (1)Press and hold the SET button between 1 and 3 seconds in measurement mode. [SET] is displayed on the main display. Release the button while [SET] is showing on the display. The main
display will show the current voltage value and the left sub display will show [SP1]. The set value will be flashing on the right sub display.

(2) Change the set value with the UP or DOWN button, and press the SET button to set the value. Then, the setting moves to [SP2] setting (The snap shot function can be used).

$$
\text { Current voltage value } \begin{aligned}
& 77010 \\
& 50,50
\end{aligned}
$$

(3) Set [SP2] in the same manner as for [SP1]. When 3 setting mode is selected, the setting moves to the [SP3] setting after finishing the [SP2] setting. Press the SET button to set the value. Then, the setting moves to the switch output delay time.
(4) Press the UP or DOWN button to select the switch output delay time.

$$
\begin{aligned}
& 7 \pi \prod 1 \\
& 311110 \\
& \text { dt }
\end{aligned}
$$

Press the UP button once to increment the value or press and hold to continuoust ) [sec.] to 5.00 [sec.] ( 0.01 [sec.]
(5) Press the SET button to set the value and the setting returns to the [SP1] setting again. Press the SET button for 2 seconds or longer in
one of the setting screens to complete the setting and return to measurement mode.
Each of the selected items (1) to (4) is enabled after the SET button is pressed.

## 9 Function Selection mode

In measurement mode, press the SET button between 3 and 5 seconds, In measurement mode, press the SET button between 3 and 5 secon
to display [F 0). Select to display the function to be changed [F\#\#] Press and hold the SET button for 2 seconds or longer in function selection mode to return to measurement mode.

9.1 Default function settings

The default settings are as follows. If no problem is caused by this setting keep the settings. To change a setting, enter function selection mode.

- [F 0] Switch output specification switchover / setting mode function

| Item | Default setting |

## 14 Maintenance

14.1 General Maintenance

- Not following proper maintenance procedures could cause the product to malfunction and lead to equipment damage.
- If handled improperly, compressed air can be dangerous.
- Maintenance of pneumatic systems should be performed only by qualified personnel.
to cut off the supply pressure. Confirm that the air is released to
- After installation and maintenance, apply operating pressure and power to the equipment and perform appropriate functional
leakage tests to make sure the equipment is installed correctly
If any electrical connections are edisturbed during maintenance, ensur they are reconnected correctly and safety checks are carried out as required to
regulations.
- Do not make any modification to the product.
maintenance instructions.
- The analogue ASW may malfunction unexpectedly, making
impossible to confirm safety. Therefore, perform the following impossible to confirm safety. Ther
maintenance or inspection regurly:

1) Retightening of the mounting screws

If the screws have become loose and the required mounting position has been lost, re-adjust the product to the correct mounting postion and re-tighten the screws.
Checking the presence or absence of damage to the lead wire is found, replace the analogue ASW or repair the lead wire
Do not use benzene, thinner or alcohol, etc. to clean the product.
Otherwise, the surface may be damaged or the product marking may be erased.
For a heavy stain, use a cloth that has been soaked with diluted neutral and fully squeezed to wipe off the stain and wipe the surface again with a dry cloth.

How to reset the product after a power cut or forced de-energizing The settings for the product are retained in memory prior to the power The output condition is also recoverable to that prior to the power loss or de-energizing. However, this may change depending on the operating environment. Therefore, check the safety of the whole installation befor operating the product.
ate control, wait until the product has

## 15 Limitations of Use

Limited warranty and Disclaimer/Compliance Requirements
Refer to Handling Precautions for SMC Products.

## 16 Product disposal

This product should not be disposed of as municipal waste. Check your local regulations and guidelines to dispose of this product correctly, in order to reduce the impact on human health and the environment.

17 Contacts
Refer to www.smcworld.com or www.smc.eu for your local distributor
